PENGENALAN

Banci Penduduk dan Perumahan Malaysia 2020 (Banci Malaysia 2020) merupakan banci keenam dilaksanakan sejak penubuhan Malaysia pada tahun 1963. Pelaksanaan banci kali ini adalah sejajar dengan *Resolution on 2020 World Population and Housing Census Programme* yang dipersetujui pada 10 Jun 2015 oleh *United Nations Economic and Social Council* yang menyarankan setiap negara ahli melaksanakan Banci Penduduk dan Perumahan sekurang-kurangnya sekali bagi tempoh 2015 hingga 2024.

Mesyuarat Jemaah Menteri pada 12 Julai 2017 telah bersetuju supaya Jabatan Perangkaan Malaysia (DOSM) melaksanakan Banci Malaysia 2020. Tadbir urus Banci Malaysia 2020 terdiri daripada Jawatankuasa Pemandu Banci yang dipengerusikan oleh Ketua Setiausaha Negara dan Jawatankuasa Utama Banci yang dipengerusikan oleh Ketua Perangkawan Malaysia selaku Pesuruhjaya Banci, serta melibatkan pelbagai agensi di peringkat persekutuan dan negeri meliputi Timbalan Pesuruhjaya, Penolong Pesuruhjaya dan Pengguna Daerah. Selain itu hampir lapan ribu orang Penyelia dan 40 ribu orang Pembanci telah dilantik bagi tempoh 2017 hingga 2022.

Penularan pandemik COVID-19 merupakan cabaran semasa pelaksanaan Banci Malaysia 2020. Banci Malaysia 2020 telah dijadualkan semula sebanyak empat kali dalam tempoh Julai 2020 hingga Oktober 2021 susulan penularan COVID-19 dan pelaksanaan Perintah Kawalan Pergerakan (PKP) di seluruh negara yang menyebabkan tempoh operasi pembancian mengambil masa selama 482 hari untuk diselesaikan. Operasi Banci Malaysia 2020 telah ditutup secara rasmi pada 31 Oktober 2021 dan daptan operasi awalan telah pun diumumkan pada 1 November 2021.

Banci Malaysia 2020 telah melalui proses transformasi dengan penggunaan Teknologi Maklumat Komunikasi (ICT) yang terkini bagi aktiviti pembancian melalui *Malaysia Integrated of Population and Housing Census System (MyIPCS)* yang meliputi 10 modul. Bagi tujuan operasi, lima mod pembancian telah diguna pakai. Seramai 23.7 peratus penduduk telah dibanci secara dalam talian iaitu melalui mod e-Census dan Computer Assisted Telephone Interview (CATI). Manakala 76.3 peratus penduduk telah dibanci menggunakan kaedah pembancian secara bersemuka sama ada melalui mod Computer-Assisted Personal Interview (CAPI), Paper and Pen Interview (PAPI) atau Drop-Off and Pick-Up (DOPU). Daripada 76.3 peratus pembancian secara bersemuka, 68.2 peratus adalah pembancian melalui CAPI dan 8.1 peratus adalah melalui PAPI dan DOPU. Justeru itu, pelaksanaan binci pada 2020 mengadaptasi transformasi pendigitalan yang boleh menjimatkan penggunaan dokumen secara hardcopy atau paperless.

Pendekatan pengurusan bersepadu telah diperkenalkan oleh DOSM iaitu dengan membangunkan portal banci (www.mycensus.gov.my) yang selamat, komprehensif dan interaktif bagi tujuan pelaksanaan Banci Malaysia 2020. Portal ini menjadi gerbang maklumat yang membekalkan pelbagai informasi banci dalam bentuk infografik, visualisasi interaktif dan pelbagai aplikasi dalam talian berkaitan banci seperti Stats Geoportal yang menyediakan data banci dalam format geospatial interaktif bagi peringkat kawasan geografi terkecil sehingga ke peringkat daerah. Satu platform khas iaitu *dashboard* Banci Malaysia 2020 telah dibangunkan untuk menyediakan data di hujung jari yang dapat memenuhi keperluan pemegang taruh dalam perancangan pembangunan sosio ekonomi. Secara tidak langsung, ia dapat merapatkan jurang digital dalam capaian sumber data yang pelbagai dan kompleks.

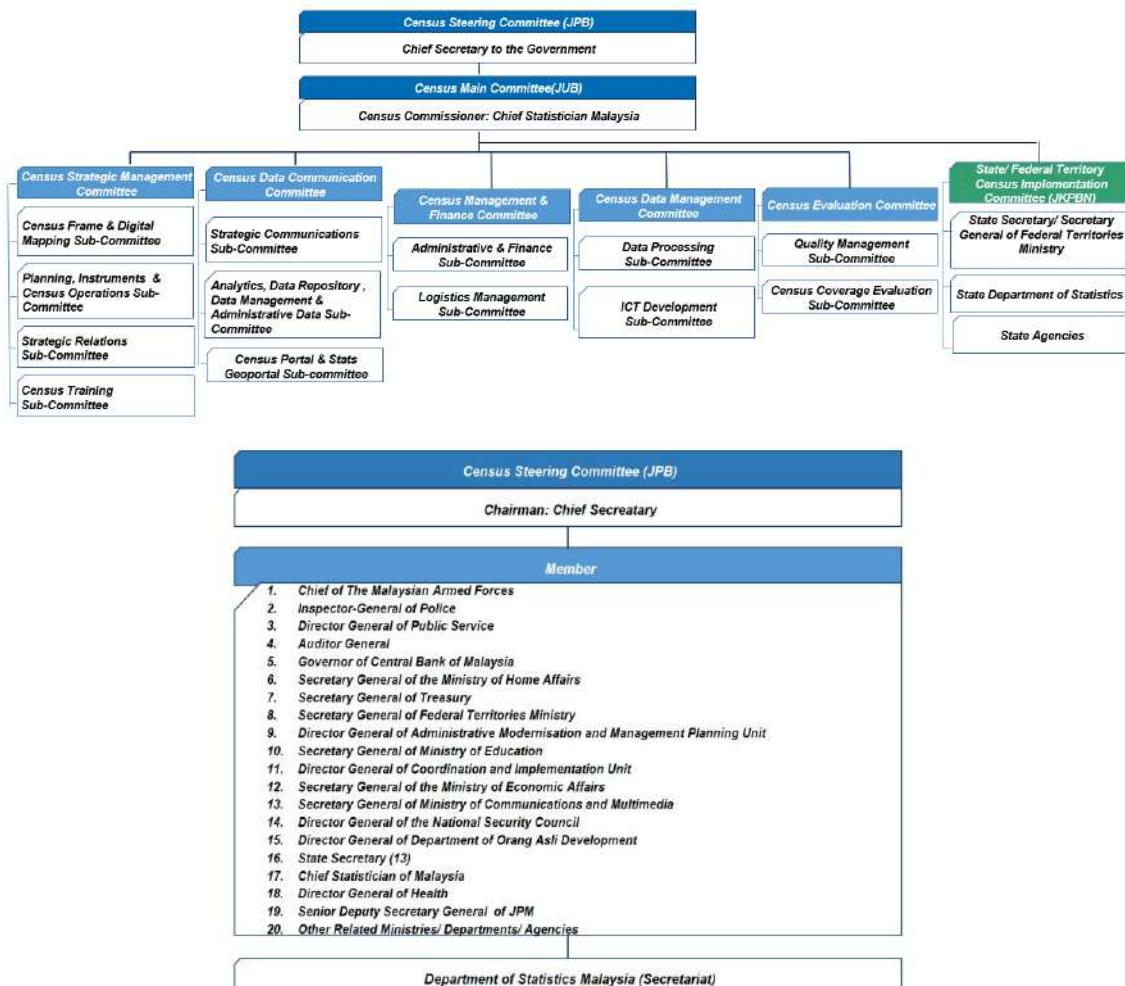

Outcome Banci Malaysia 2020 akan memberi tumpuan kepada agenda nasional dan menjadi penanda aras baru pencapaian negara. Maklumat yang berintegriti dan *reliable* digunakan sebagai input dalam membuat keputusan yang tepat berorientasikan *evidence-based policy* untuk perancangan, pelaksanaan, pemantauan dan penilaian *blueprint* pembangunan negara. Statistik yang terkini dan *reliable* dapat menyumbang ke arah keseimbangan dan kelestarian pembangunan bandar melalui pembangunan fizikal dan susunan yang terancang serta memperkuuh inklusiviti ke arah masyarakat yang sejahtera.

Sebanyak 45 topik penerbitan Banci Malaysia 2020 akan disediakan. Penerbitan ini mengandungi sembilan petunjuk/ indikator utama iaitu penduduk, isi rumah, tempat kediaman, jantina, umur, kewarganegaraan, etnik, agama dan taraf perkahwinan. Lebih daripada 1,000 laporan Banci Malaysia 2020 merangkumi 13 negeri, 3 wilayah persekutuan, 160 daerah pentadbiran (termasuk Perlis, W.P. Kuala Lumpur dan W.P. Labuan), 222 parlimen dan 600 dewan undangan negeri akan diterbitkan secara berperingkat bermula Februari 2022 sehingga 2024.

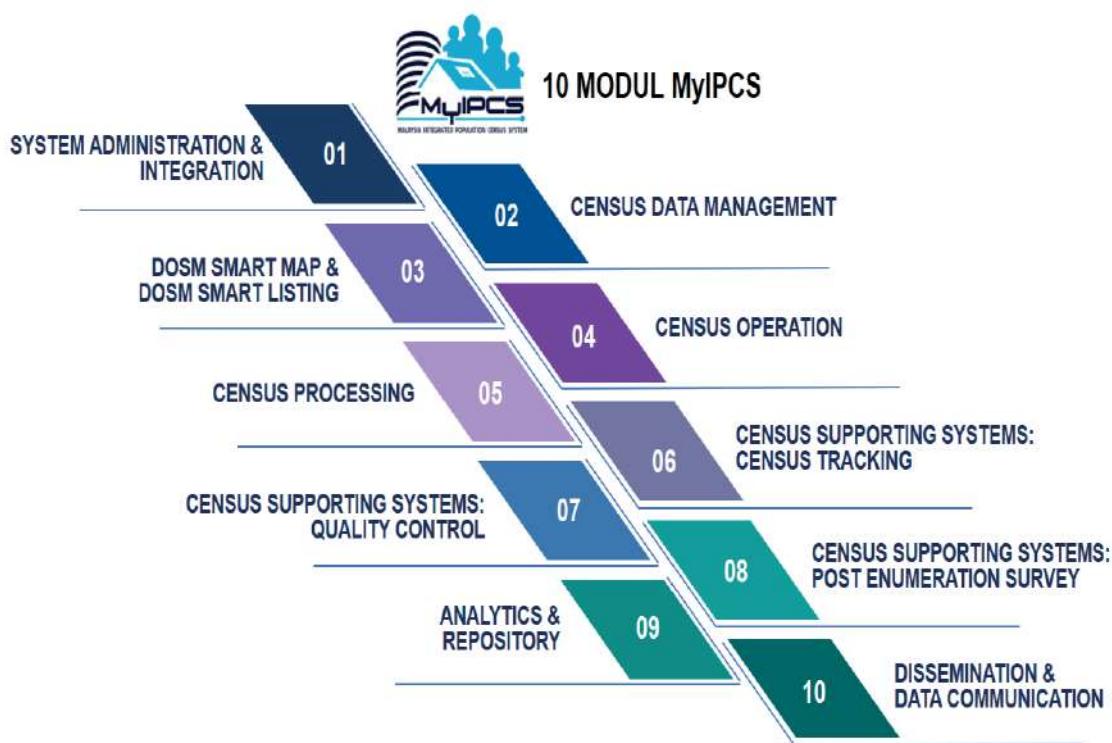

OVERVIEW

Population and Housing Census of Malaysia 2020 (MyCensus 2020) is the sixth census conducted since the establishment of Malaysia in 1963. The implementation of MyCensus 2020 is in line with the Resolution on 2020 World Population and Housing Census Program agreed on 10 June 2015 by the United Nations Economic and Social Council (ECOSOC) which recommends that each member state implement its census at least once during the period 2015 to 2024.

The Cabinet Meeting on 12 July 2017 has agreed that the Department of Statistics, Malaysia (DOSM) implement MyCensus 2020. The governance of MyCensus 2020 comprise of the Census Steering Committee chaired by the Chief Secretary to the Government and the Census Main Committee chaired by the Chief Statistician Malaysia as the Census Commissioner and the committee as well as various agencies from federal and state levels. The operation of the census is led by the Deputy Commissioner, Assistant Commissioner and District Superintendent. In addition, almost eight thousand Supervisors and 40 thousand Enumerators have been appointed for the period 2017 to 2022.

The outbreak of the COVID-19 pandemic in early 2020 has been a challenge to conduct of MyCensus 2020. MyCensus 2020 was rescheduled four times in the period of July 2020 to October 2021 following the COVID-19 outbreak and the implementation of the Movement Control Order (MCO). Thus, the census enumeration took 482 days to complete. MyCensus 2020 operation was officially closed on 31 October 2021 and the preliminary operation findings were announced on 1 November 2021.

MyCensus 2020 has undergone a transformation process with the usage of Information and Communications Technology (ICT) in census activities via Malaysia Integrated Population and Housing Census System (MyIPCS) which covers 10 modules. For census operation, five modes have been used. A total of 23.7 per cent of the population was counted online through e-Census and Computer Assisted Telephone Interview (CATI). Meanwhile, 76.3 per cent of the population was counted using the face-to-face interview either through Computer Assisted Personal Interview (CAPI), Paper and Pen Interview (PAPI) or Drop-Off and Pick-Up (DOPU). Out of the 76.3 per cent face-to-face interview, 68.2 per cent were through CAPI and 8.1 per cent were through PAPI and DOPU. Therefore, the implementation of the census in 2020 adapts the transformation of digitalisation that enabled a reduction in the use of hardcopy or paperless.

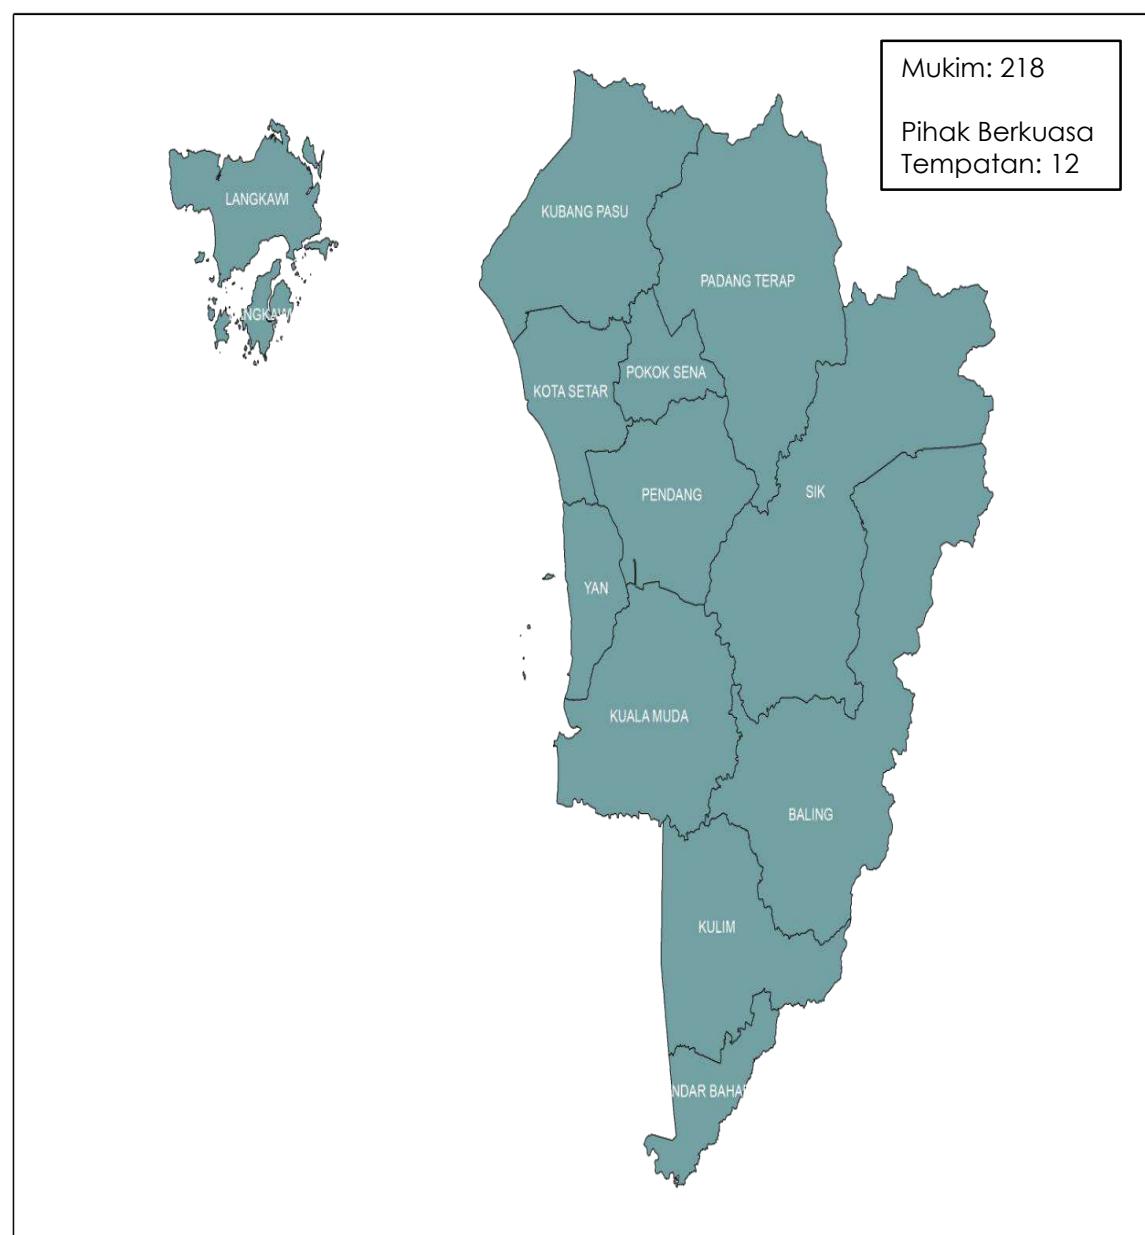

An integrated management has been introduced by DOSM by developing a secured, comprehensive and interactive census portal (www.mycensus.gov.my) for the purpose of implementing MyCensus 2020. This portal is an information gateway that provides various census information in the form of infographics, interactive visualizations and various online applications such as Stats Geoportal which provide census data in an interactive geospatial format for the smallest geographical area level up to the district level. A special platform, MyCensus 2020 dashboard has been developed to provide data at finger tips to fulfil stakeholders' need in socio-economic development planning. Indirectly, it can bridge the digital divide in accessing diverse and complex data sources.

The outcome of MyCensus 2020 will focus on the national agenda and serve as benchmark of national achievement. A reliable information with Integrity and are used as input for evidence-based policy decision making in planning, implementation, monitoring and evaluation of national development blueprints. Latest and reliable statistics contribute towards the balance and sustainability of urban development through physical development and strengthening inclusivity towards prosperous society.

A total of 45 MyCensus 2020 publication topics will be published. This publication comprises nine main indicators namely population, households, living quarters, sex, age group, citizenship, ethnic group, religion and marital status. More than 1,000 MyCensus 2020 reports covering 13 states, 3 federal territories, 160 administrative districts (includes Perlis, W.P. Kuala Lumpur and W.P. Labuan), 222 parliaments and 600 state assemblies will be published in stages from February 2022 to 2024.

1. PENGENALAN

Penuaan penduduk disifatkan sebagai satu fenomena di mana individu warga tua menjadi penyumbang sebahagian besar komposisi daripada keseluruhan jumlah populasi (*Ageing in the Twenty-First Century*, United Nations (2012). Malaysia telah mentakrifkan warga tua atau warga emas sebagai individu yang berumur 60 tahun dan lebih seperti yang diterima pakai dalam *United Nations World Assembly on Ageing* di Vienna (United Nations, 1982) dan dalam kalangan negara-negara ASEAN. Dasar Warga Emas Negara (DWEN) dan Pelan Tindakan Warga Emas Negara (PTWEN) telah digubal dan diluluskan oleh kerajaan pada 5 Januari 2011 bagi memberi perhatian kepada aspek kebijakan dan keperluan golongan warga emas.

United Nations telah menetapkan tiga kategori penuaan, iaitu ageing society, aged society dan super-aged society di mana masing-masing merujuk kepada penduduk berumur 65 tahun dan lebih mencecah 7 peratus, 14 peratus dan 20 peratus.

Jadual 1: Kategori penuaan penduduk

Kategori penuaan penduduk	Malaysia	
	Tahun	Peratus penduduk (%)
United Nations - Penduduk berumur 65 tahun dan lebih	2020 ¹	6.8
1. Ageing Society (7%)	2020 ²	7.2
2. Aged Society (14%)	2039 ²	14.1
3. Super Aged (20%)	2050 ²	19.9
Dasar Warga Emas Negara (DWEN) (60 tahun dan lebih: 15%)	2030 ²	15.3

Nota:

² Unjuran Penduduk (Semakan Semula), 2010-2040 berdasarkan Banci Penduduk dan Perumahan Malaysia 2010

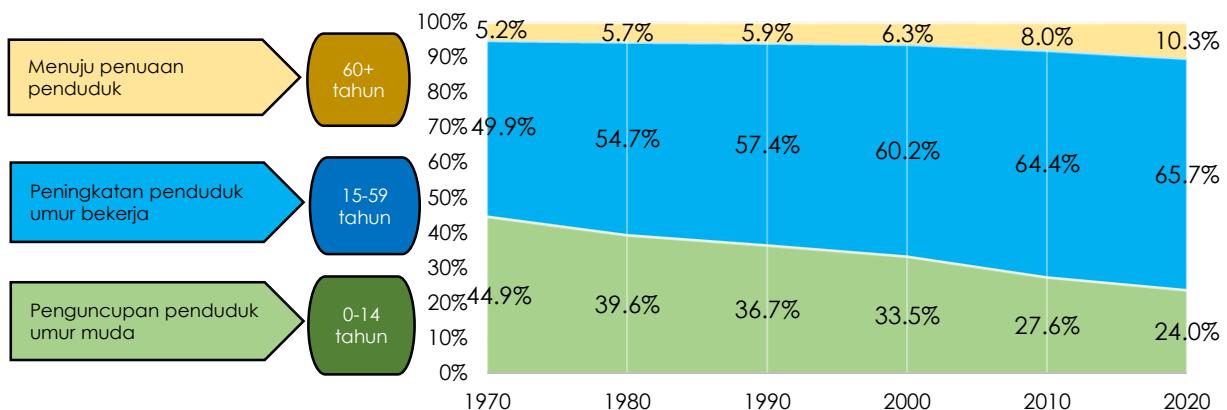

Berdasarkan DWEN, penduduk Malaysia telah diunjurkan mencapai negara menua pada 2030 dengan peratusan penduduk berumur 60 tahun dan lebih adalah 15.3 peratus. Data unjuran ini akan dikemaskini semula berdasarkan Banci Malaysia 2020. Menurut kategori penuaan UN, Malaysia dijangka mengalami penuaan penduduk pada 2020 dengan

anggaran penduduk berumur 65 tahun dan lebih mencecah 7.2 peratus. Walau bagaimanapun, berdasarkan penemuan utama Banci Malaysia 2020, penduduk berumur 65 tahun dan lebih adalah 6.8 peratus.

2. PERUBAHAN STRUKTUR DEMOGRAFI PENDUDUK MALAYSIA

Peratusan penduduk umur muda (0-14 tahun) pada tahun 2020 menunjukkan pengucupan kepada 24.0 peratus berbanding 44.9 peratus pada 1970. Manakala, peratusan penduduk umur bekerja (15 hingga 59 tahun) meningkat kepada 65.7 peratus pada tahun 2020 berbanding 49.9 peratus pada 1970, sekaligus menunjukkan peningkatan dalam potensi guna tenaga negara. Penduduk Malaysia yang berumur 60 tahun dan ke atas pada tahun 1970 direkodkan 5.2 peratus dan trend umur kumpulan ini terus menunjukkan peningkatan kepada 10.3 peratus pada tahun 2020 berbanding tahun Banci sebelumnya. Sekiranya trend ini berterusan, Malaysia dijangka menjadi negara tua pada 2030.

Perubahan kumpulan umur muda akan mencerminkan struktur piramid penduduk, dengan peratusan penduduk muda yang kurang menduduki dalam struktur sosial masyarakat. Bilangan kumpulan umur generasi akan datang akan berkurangan secara perlahan-lahan sekali gus mengubah landskap piramid penduduk. Perubahan dalam struktur umur penduduk boleh digambarkan melalui piramid penduduk yang dipaparkan di Rajah 1. Pada tahun 1957, bentuk piramid penduduk adalah progresif dengan tapak yang luas, cerun cekung dan puncak yang tajam. Pada tahun 2020, bentuk piramid penduduk Malaysia adalah regresif di mana tapak semakin mengecil dan dijangka kekal sehingga 2040. Puncak yang rata dan lebar menunjukkan populasi penduduk tua semakin meningkat.

Transisi demografi adalah proses perubahan struktur penduduk yang perlakan di mana penduduk beralih dari tahap kesuburan dan kematian yang tinggi ke tahap kesuburan dan kematian yang rendah serta berlaku perubahan ketara terhadap taburan umur penduduk.

Paparan 2: Transisi demografi, Malaysia, 1911-2020

Peralihan demografi Malaysia menunjukkan kadar kelahiran kasar (CBR) menunjukkan penurunan kepada 14.4 bagi setiap seribu penduduk pada 2020 dan kadar kematian kasar (CDR) juga menurun kepada 5.1 bagi setiap seribu penduduk pada 2020 (Paparan 2).

Penemuan utama Banci Penduduk dan Perumahan Malaysia 2020 menunjukkan Perak mencatatkan peratusan penduduk tua (60 tahun dan lebih) tertinggi dengan 13.4 peratus. Ini diikuti oleh Kedah dan Perlis masing-masing mencatatkan 12.1 peratus dan 11.6 peratus.

3. FAKTOR PENUAAN PENDUDUK

Pertubuhan Kesihatan Sedunia (WHO) telah mengenal pasti dua pemacu utama penuaan penduduk dunia adalah disebabkan oleh penurunan berterusan dalam kadar kesuburan jumlah (TFR) dan peningkatan jangka hayat.

3.1 Penurunan Kadar Kesuburan Jumlah

Kadar kelahiran kasar telah menurun dari 32.4 pada tahun 1970 kepada 14.4 bagi setiap seribu penduduk pada 2020, kadar terendah dalam tempoh lima dekad. Trend penurunan kadar kelahiran ini telah menyebabkan penurunan TFR. Sejak 2013, Malaysia telah mencatatkan penurunan TFR daripada 4.9 anak pada 1970 kepada 1.7 anak pada 2020 bagi setiap wanita berumur 15-49 tahun di mana ia telah mencatatkan TFR bawah paras penggantian kesuburan iaitu pada 2.1 anak bagi setiap wanita (Carta 2).

Carta 2: Kadar Kesuburan Jumlah, Malaysia, 1970-2020

Sumber: Jabatan Perangkaan Malaysia

Punca penurunan kesuburan antaranya disumbangkan oleh peningkatan bilangan wanita dalam pendidikan tinggi dan penyertaan kaum wanita dalam tenaga buruh sehingga menyebabkan mereka lewat berkahwin atau memilih tidak kahwin. Perkahwinan lewat mendorong kepada kurang bilangan anak yang dilahirkan bagi setiap keluarga.

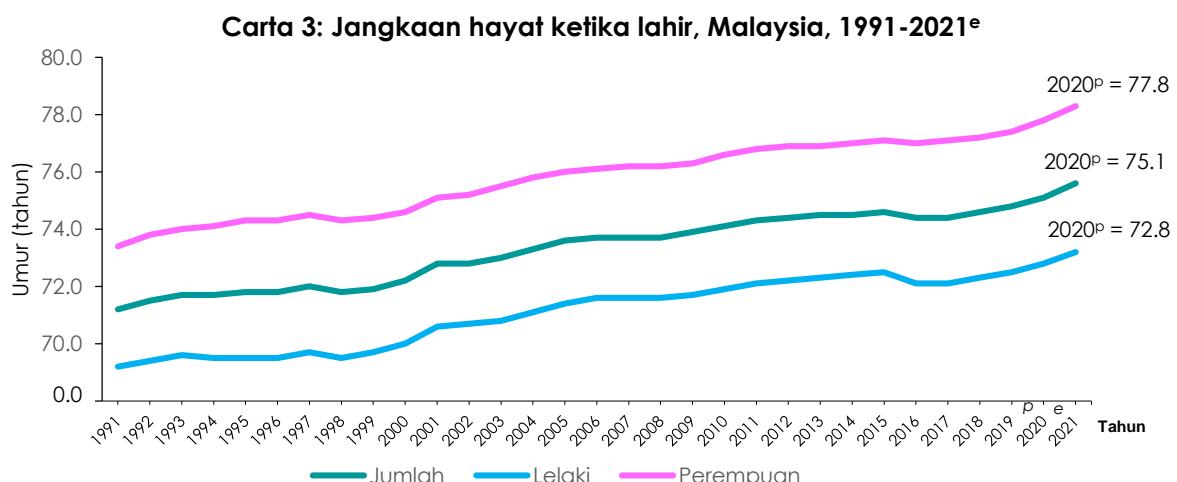

Menurut Naohiro YASHIRO (1988), dengan pendidikan dan peluang pekerjaan yang lebih baik, peratusan orang yang belum berkahwin meningkat dan ini merupakan fenomena biasa di negara moden dan perindustrian. Perkahwinan lewat turut menyebabkan purata umur ibu pada kelahiran hidup pertama meningkat daripada 26.6 tahun pada 2001 kepada 28.0 tahun pada 2020.

3.2 Peningkatan Jangkaan Hayat

Peningkatan jangka hayat telah menyebabkan pertambahan penduduk umur tua. Jangka hayat semasa lahir telah meningkat daripada 71.2 tahun pada 1991 kepada 75.1 tahun pada 2020. Lelaki dan perempuan yang ketika lahir pada 2020 masing-masing dijangka hidup selama 72.8 tahun dan 77.8 tahun lagi berbanding 69.2 tahun dan 73.4 tahun pada 1991.

Antara faktor peningkatan jangkaan hayat adalah disebabkan sistem perkhidmatan kesihatan yang baik seperti akses kepada penjagaan kesihatan yang mesra umur, kesedaran penduduk terhadap kepentingan menjaga kesihatan yang semakin meningkat dan pencegahan kepada penyakit kronik. Lindsay et al. (2014) menyatakan bahawa peningkatan jangka hayat dalam 200 tahun yang lalu adalah disebabkan oleh kawalan penyakit berjangkit, makanan yang banyak dan lebih selamat, keadaan kebersihan yang lebih baik, dan peningkatan sosial bukan perubatan yang lain.

Di peringkat global semua negara, seseorang yang berumur 65 tahun pada 2015-2020 secara purata dijangka boleh hidup dengan tambahan 17 tahun. Manakala menjelang 2045-2050, angka ini dijangka meningkat kepada 19 tahun (*World Population Ageing 2019, United Nations*).

4. FAKTOR PENUAAN PENDUDUK

4.1 Impak kepada Ekonomi

a. Peningkatan Perbelanjaan Awam

Peningkatan bilangan warga tua yang tidak diimbangi dengan bilangan penduduk muda dan bekerja akan mencetuskan keimbangan terhadap pertumbuhan ekonomi sesebuah negara. Senario ini dilihat sebagai satu faktor yang menyumbang kepada peningkatan kos perbelanjaan awam yang akan memberi implikasi kepada program insurans sosial dan sistem pencen seperti skim pencen perkhidmatan awam, Kumpulan Wang Simpanan Pekerja (KWSP) serta Skim Persaraan Swasta (SPS). Sumbangan kepada dana keselamatan sosial semakin berkurangan, tetapi dana disalurkan kepada warga tua semakin meningkat.

Petikan artikel *How Demographic Drives The Economy* oleh Adam Hayes pada 28 Mei 2021 menyatakan bahawa penduduk yang semakin tua dan pertumbuhan tenaga buruh yang lebih perlahan akan menjaskan ekonomi. Ia mendorong pertumbuhan KDNK menjadi perlahan, nisbah tanggungan bagi umur tua meningkat dan belanjawan awam tertekan di bawah bebanan jumlah kos program kesihatan.

b. Penguncupan Tenaga Buruh

Penuaan penduduk boleh menjasikan pertumbuhan ekonomi disebabkan oleh pengurangan produktiviti. Penuaan penduduk dijangka mengurangkan kadar penyertaan tenaga buruh dan tabungan serta meningkatkan keimbangan terhadap pertumbuhan ekonomi lebih perlahan (Bloom et al., 2010). Perubahan struktur penduduk bagi kumpulan umur bekerja secara beransur-ansur menguncup akan menyebabkan pungutan cukai oleh kerajaan daripada kumpulan umur ini semakin berkurang. Ini secara tidak langsung akan menyekat perbelanjaan negara.

Umur wajib bagi persaraan di Jepun, Amerika Syarikat dan Singapura masing-masing ditetapkan pada 60 tahun, 62-65 dan 62 tahun (Kashiwagi, 2018). Sebaliknya, umur persaraan wajib anggota sektor awam di Malaysia dipinda tiga kali dalam tempoh 11 tahun iaitu daripada 55 tahun kepada 56 tahun, 58 tahun dan terkini kepada 60 tahun yang berkuatkuasa mulai 1 Januari 2012.

4.2. Impak kepada Sistem Kesihatan

Peningkatan penuaan penduduk mendorong perbelanjaan kerajaan terhadap kos rawatan dan penjagaan kesihatan penduduk meningkat dari semasa ke semasa. Tahap kesihatan secara amnya menurun dan lebih banyak rawatan perubatan diperlukan apabila umur meningkat seperti mendapatkan rawatan di klinik/ hospital, pembedahan, terapi fizikal dan pembelian ubat-ubatan.

Warga tua juga sering dikaitkan dengan penyakit kronik yang memerlukan rawatan dan penjagaan berpanjangan. Peningkatan penyakit Non-Communicable diseases (NCD) seperti kanser, sakit jantung, strok dan diabetes menyebabkan kerajaan perlu menggunakan lebih banyak peruntukan bagi menyediakan kemudahan dan perkhidmatan penjagaan kesihatan penduduk. Di samping itu, penuaan penduduk mendorong implikasi keperluan untuk geriatrik jangka panjang penjagaan kesihatan. Matlamat penjagaan geriatrik untuk warga emas tidak semestinya untuk menyembuhkan tetapi untuk meningkatkan kesihatan warga emas.

Apabila penduduk tua semakin meningkat, perbelanjaan untuk penjagaan kesihatan akan meningkat dan Malaysia telah menyemak semula perbelanjaannya untuk penjagaan kesihatan warga emas. Pada tahun 1970, perbelanjaan penjagaan kesihatan hanya 2.7 peratus daripada KDNK berbanding 4.3 peratus pada tahun 2019.

4.3. Impak kepada Struktur Sosial

Penuaan penduduk bukan sahaja memberi kesan kepada ekonomi negara, malah kepada individu. Individu perlu menyediakan wang persaraan mencukupi atau membuat perancangan bermula sekarang bagi persediaan menghadapi masa tua. Jangkaan hayat pada umur 60 tahun pada 2020 bagi lelaki dan perempuan adalah masing-masing 18.6 dan 21.4 tahun dan kehidupan sepanjang jangka hayat ini dengan tanpa pendapatan bulanan sepertimana ketika masih bekerja adalah satu cabaran besar kepada penduduk tua. KWSP juga telah mengumumkan bahawa kuantum baharu Simpanan Asas akan dinaikkan daripada RM228,000 kepada RM240,000 bermula 1 Januari 2019. Jumlah ini ditetapkan sebagai sasaran simpanan minimum ahli perlu ada apabila mencecah umur 55 tahun menampung keperluan asas persaraan selama 20 tahun iaitu sehingga 75 tahun (Kumpulan Wang Simpanan Pekerja. (2019, Februari 13)).

5. RUMUSAN

Malaysia dilihat bersedia secara prinsip untuk menangani cabaran negara tua melalui pewujudan dasar dan inisiatif seperti Rancangan Malaysia Ke-12 (RMKe-12), Dasar Warga Emas Negara dan Pelan Tindakan Perkhidmatan Kesihatan Warga Emas. Kerajaan Persekutuan telah mengenal pasti sembilan (9) bidang fokus strategik dalam menghadapi status negara tua menjelang 2030. Antaranya menggalakkan minat dan kemampuan bekerja, meningkatkan kebolehpasaran serta menggalakkan nilai kesukarelawanan warga emas (Syahidah Husna M. Bakeri, 2020). Peranan kerajaan dilihat amat penting dalam mendepani isu-isu berkaitan warga tua memandangkan sistem sokongan kekeluargaan sedia ada dilihat tidak mampu untuk mendepani isu-isu berkaitan warga emas seperti kesunyian, dementia, sokongan sosial dan status kesihatan mental & fizikal (Ahmad Shukri & Norliza, 2018). Langkah kerajaan mewujudkan Pusat Aktiviti Warga Emas (PAWE) bagi memberi ruang warga emas melakukan aktiviti komuniti adalah sangat baik dalam mendepani isu penuaan di Malaysia.

MALAYSIAN POPULATION AGEING

1. INTRODUCTION

Population ageing is characterised as a phenomenon in which elderly individuals constitute a large part of the composition of the total population (Ageing in the Twenty-First Century, United Nations (2012). Individuals aged 60 and over are considered elderly or senior people in Malaysia, as defined by the United Nations World Assembly on Aging in Vienna (UN, 1982) and ASEAN countries. National Policy for Older Persons and the Plan of Action For Older Persons were formulated and approved by the government on 5 January 2011 to pay attention to the welfare and needs of the elderly.

The United Nations has defined three categories of ageing, namely ageing society, aged society and super-aged society which each refers to the population aged 65 years and over reaching 7 per cent, 14 per cent and 20 per cent.

Table 1: Population Ageing Categories

Population Ageing Categories	Malaysia	
	Year	Percentage of population (%)

2. Aged Society (14%)	2039 ²	14.1
3. Super Aged (20%)	2050 ²	19.9
National Policy For Older Persons (60 years and over: 15%)	2030 ²	15.3

Notes:

¹ Population and Housing Census of Malaysia 2020

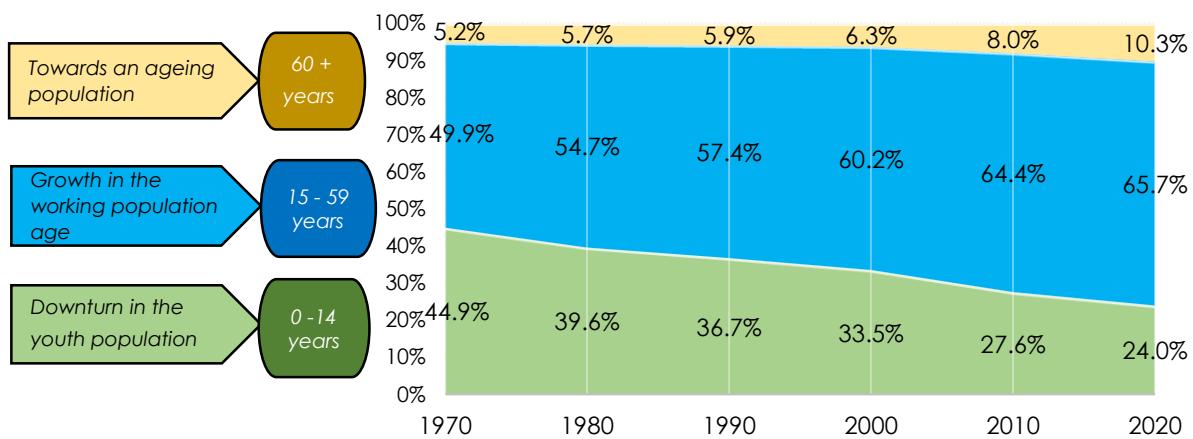

² Population Projections (Revised), 2010-2040 based on the Population and Housing Census of Malaysia 2010

Based on the National Policy for Older Persons, the Malaysian population is projected to reach an ageing nation by 2030 with the percentage of the population aged 60 and over being 15.3 per cent. This projection data will be updated based on the Malaysia 2020 Census. According to the UN ageing category, Malaysia is expected to become an ageing nation in 2020 with projected population of 65 years and over reaching 7.2 per cent. However, based on the main findings of the Malaysia 2020 Census, the population aged 65 years and over is 6.8 per cent.

2. CHANGES IN THE DEMOGRAPHIC STRUCTURE OF THE MALAYSIAN POPULATION

The percentage of young population (0-14 years) in 2020 decreased to 24.0 per cent as compared to 44.9 per cent in 1970. Meanwhile, the percentage of the working age population (15 to 59 years) increased to 65.7 per cent in 2020 as compared to 49.9 per cent in 1970, as well, showing an increase in the employment potential of the country. The population aged 60 and over in 1970 was recorded at 5.2 per cent and the age trend of this group continued to show an increase to 10.3 per cent in 2020 as compared to the previous census year. If this trend continues, Malaysia is expected to become an ageing nation by 2030.

Changes in the young age group will reflect the structure of the population pyramid, with a small percentage of the young population occupying the social structure of society. The composition of the next generation will slowly decrease, thus changing the landscape of the population pyramid. Changes in the age structure of the population can be illustrated through the population pyramid in Figure 1. In 1957, the shape of the population pyramid was progressive with broad bases, concave slopes and sharp peaks. In 2020, the shape of the Malaysian population pyramid is regressive with the base getting smaller and is expected to remain so until 2040. The flat and broad peaks indicate that the elderly population is increasing.

Demographic transition is a process of changing the population structure that is slow in which the population shifts from high levels of fertility and mortality to low levels of fertility and mortality as well as significant changes in the age distribution of the population happen.

Exhibit 2: Demographic transition, Malaysia, 1911-2020

Malaysia's demographic transition shows that the crude birth rate (CBR) decreased to 14.4 per thousand population in 2020 and the crude death rate (CDR) also decreased to 5.1 per thousand population in 2020 (Exhibit 2).

The main findings of the Malaysian Population and Housing Census 2020 shows that Perak recorded the highest percentage of the elderly population (60 years and over) with 13.4 per cent. This was followed by Kedah and Perlis, which recorded 12.1 per cent and 11.6 per cent respectively.

3. FACTORS OF AGEING POPULATION

The World Health Organization (WHO) has identified two main drivers of the ageing population is due to the continued decrease in total fertility rate (TFR) and increased life expectancy.

3.1 Decrease in Total Fertility Rate

The crude birth rate has dropped from 32.4 in 1970 to 14.4 per thousand population in 2020, the lowest rate in five decades. The downward trend in the birth rate has led to a decrease in TFR, since 2013 Malaysia recorded TFR below the fertility replacement level of 2.1 children per woman (Chart 2).

Chart 2: Total Fertility Rate, Malaysia, 1970-2020

Source: Department of Statistics, Malaysia

The cause of the decline in fertility is contributed by the increase in the number of women in higher education and the participation of women in the labour force, causing them to marry late or choose not to marry. Late marriage lead to fewer children being born per family.

According to Naohiro YASHIRO (1988), with better education and employment opportunities, the percentage of unmarried people is increasing and this is a common phenomenon in modern and industrialised countries. Late marriage also caused the average age of mothers at first live birth increased from 26.6 years in 2001 to 28.0 years in 2020.

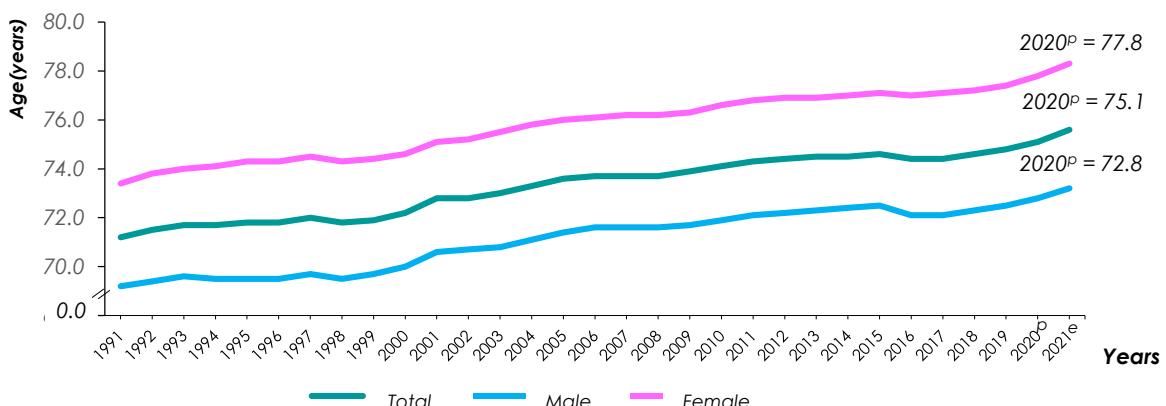

3.2 Increased Life Expectancy

The increase in life expectancy has led to an increase in the ageing population. Life expectancy at birth has increased from 71.2 years in 1991 to 75.1 years in 2020. Males and females at birth in 2020 are expected to live another 72.8 years and 77.8 years respectively, compared to 69.2 years and 73.4 years in 1991.

Among the factors that increase life expectancy are due to a good health service system such as access to age-friendly health care, the population's awareness of the importance of maintaining health is increasing and prevention of chronic diseases. Lindsay et al. (2014) noted that the increase in life expectancy in the last 200 years was due to infectious disease control, more and safer food, better hygiene conditions, and other non-medical social improvements.

Globally, in all countries, a person aged 65 years in 2015-2020 on average, is expected to be able to live an additional 17 years. Meanwhile by 2045-2050, this figure is expected to increase to 19 years (World Population Ageing 2019, United Nations).

4. POPULATION AGEING FACTORS

4.1 Impact on the Economy

a. Increased Public Expenditure

The increase in the number of elderly population who are not balanced with the composition of young and working population will raise concerns about the economic growth of a country. This scenario is seen as a factor that contributes to the increase in the cost of public expenditure, which will have implications for social insurance programs and the pension system such as the public service pension scheme, Employees Provident Fund (EPF) and the Private Retirement Scheme (SPS). Contributions to social security funds are declining, but funds channeled to the elderly are increasing.

An excerpt of the article *How Demographics Drives The Economy* by Adam Hayes on May 28, 2021 states that an ageing population and slower labour force growth will affect the economy. It drives GDP growth to slow down, the dependency ratio for old age increases and public budgets are stressed under the burden of the total cost of health programs.

b. Labour Force Shortage

Population ageing may affect economic growth due to a reduction in productivity. Population ageing is expected to reduce the level of labour force participation and savings as well as increase the concern for slower economic growth (Bloom et al., 2010). Changes in the population structure for the working-age group will gradually reduce the tax collection by the government from this age group. This will indirectly constrain state spending.

The compulsory retirement age in Japan, the United States, and Singapore is fixed at 60 years, 62-65 years, and 62 years, respectively (Kashiwagi, 2018). On the other hand, the retirement age for public sector in Malaysia has been amended three times within 11 years, namely from 55 years to 56 years, 58 years, and most recently to 60 years with effect from 1 January 2012.

4.2. Impact on the Health System

The increase in the age of the population has driven government spending on medical costs and population health care to increase from time to time. Health levels generally decline and more medical treatment is required when age increases, such as getting treatment at clinics/ hospitals, surgery, physical therapy and drug purchases.

Citizens are also often associated with chronic diseases that require long-term care and treatment. The increase in Non-Communicable Diseases (NCD) such as cancer, heart disease, stroke, and diabetes are causing the government to spend more on providing health care facilities and services for the population. In addition, the ageing population is driving the implications of the need for long-term geriatric health care. The goal of geriatric care for citizens is not necessarily to cure but to improve the health level of elderly citizens.

When the population of elderly increases, the spending on health care will increase and Malaysia has redefined health care spending for elderly citizens. In 1970, health care expenditure was only 2.7 per cent of GDP as compared to 4.3 per cent in 2019.

4.3. Impact on Social Structure

Population ageing not only affects the national economy but individuals. Individuals need to have adequate retirement money or be prepared for their old age. Life expectancy at age 60 in 2020 for men and women is 18.6 and 21.4 years and life throughout this life span with no monthly income as while still working is a major challenge to the elderly population. The EPF announced the new quantum of Basic Savings will be increased from RM228,000 to RM240,000 starting from January 1, 2019. This amount is set as the minimum savings that members must have when they reach the age of 55 to cover the basic retirement needs of 20 years, which is up to 75 years. (Employees Provident Fund. (2019, February 13)).

5. CONCLUSION

Malaysia is seen to be ready in principle to address the challenges of the elderly through the creation of policies and initiatives, such as the) the National Senior Citizens Policy, the Senior Citizens Health Services Action Plan and 12th Malaysia Plan (12MP). The Federal Government has identified nine (9) strategic focus areas in facing the status of the elderly by 2030. For example, encouraging interest and ability to work, increasing marketability and promoting the value of senior citizenship (Syahidah Husna M. Bakeri, 2020). The role of the government is seen as very important in dealing with issues related to the elderly as the existing family support system is not able to deal with issues related to the elderly such as loneliness, dementia, social support and mental & physical health status (Ahmad Shukri & Norliza, 2018). The government's move to create a Senior Citizens Activity Center (PAWE) to provide space for senior citizens to do community activities is very encouraging in facing the issue of ageing in Malaysia.

PERUBAHAN DEMOGRAFI: DI MANA GENERASI MUDA DI MALAYSIA?

Muhammad Hazim Mohd Abd Rahim; Amerudin Abdul Ghani;
Nazaria Baharudin; Mohamad Shukor Mat Lazim

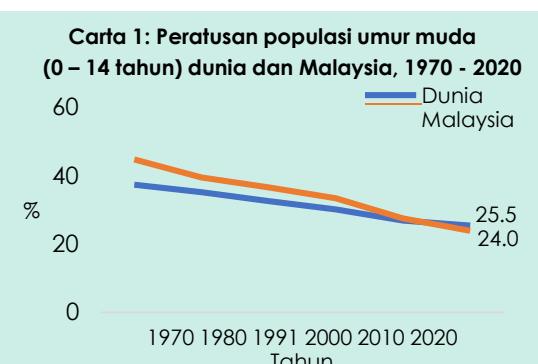

1. Siapakah Generasi Muda?

Pertubuhan Kesihatan Sedunia (WHO) mengkategorikan "orang muda" sebagai remaja dan orang muda dari 10 hingga 24 tahun. United Nations mentakrifkan belia sebagai penduduk berumur 15 hingga 24 tahun. Dalam artikel ini, kita akan membincangkan taburan umur penduduk Malaysia bagi kumpulan umur 0 hingga 14 tahun mengikut negeri dan jantina menggunakan penemuan utama Banci Penduduk dan Perumahan Malaysia 2020. Golongan muda merupakan kumpulan yang sangat penting dalam masyarakat dan juga aset negara serta tunjang pembangunan negara pada masa hadapan. Generasi ini dilihat berpotensi dari segi daya saing, pemikiran dan semangat yang tinggi bagi memastikan pembangunan negara yang mampan.

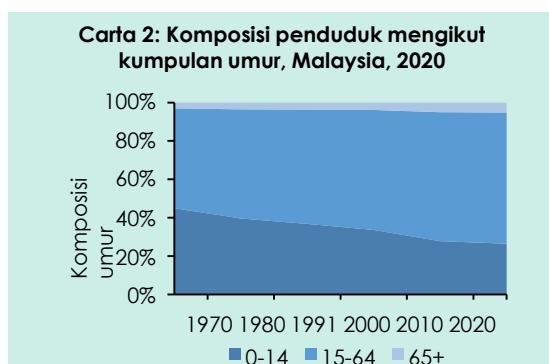

2. Taburan penduduk umur muda di Malaysia

Penduduk umur muda di Malaysia dan dunia

Pada tahun 2020, terdapat 7.8 billion penduduk dunia. Daripada jumlah itu, golongan umur muda dunia merekodkan sebanyak 2.0 billion yang menyumbang kepada 25.5 peratus daripada keseluruhan populasi dunia. Manakala berdasarkan penemuan Banci Penduduk dan Perumahan Malaysia 2020, bilangan penduduk Malaysia berjumlah 32.4 juta, dengan purata kadar pertumbuhan penduduk tahunan 1.7 peratus bagi tempoh 2010 hingga 2020. Peratus penduduk umur muda menunjukkan corak penurunan sejak 1970 hingga 2020 dengan merekodkan 24.0 peratus pada tahun 2020 berbanding 44.9 peratus pada tahun 1970.

Penduduk umur muda mengikut jantina

Peratusan penduduk usia muda mencatatkan corak penurunan yang laju bagi tempoh 1970 hingga 2020. Penduduk lelaki mencatatkan penurunan daripada 45.3 peratus kepada 26.0 peratus. Sementara itu, peratusan wanita juga mencatatkan penurunan daripada 44.4 peratus kepada 26.9 peratus. Di samping itu, berdasarkan unjuran penduduk 2010 – 2040, penduduk umur muda bagi lelaki dan perempuan diunjurkan menurun masing-masing kepada 18.4 peratus dan 18.9 peratus.

Carta 3: Peratusan penduduk mengikut kumpulan umur dan jantina, 1970, 2020 dan 2040

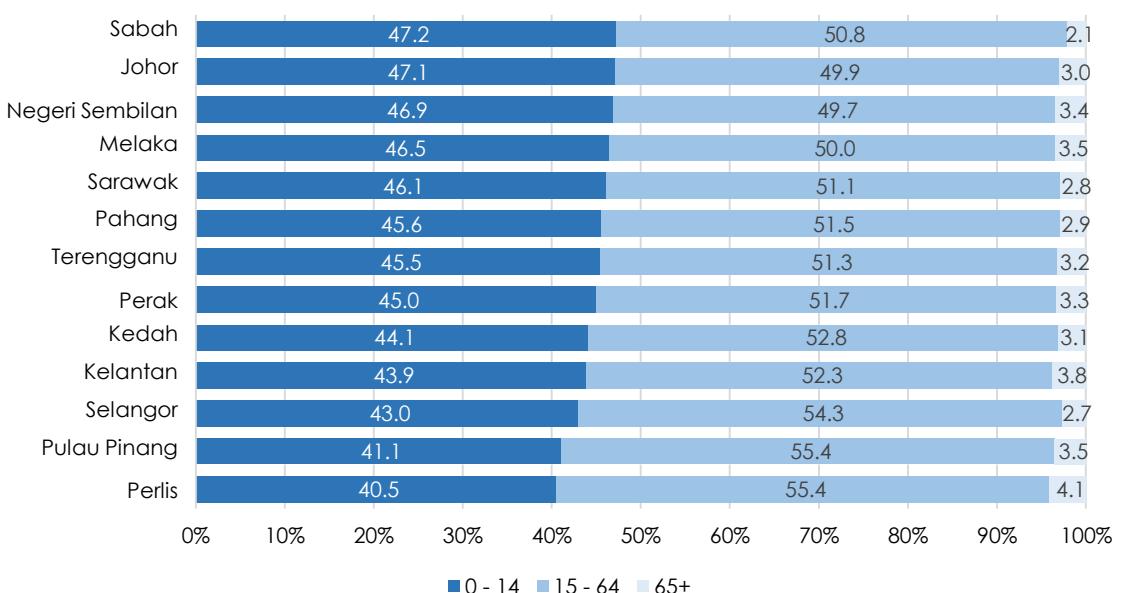

Penduduk umur muda mengikut kumpulan umur dan negeri

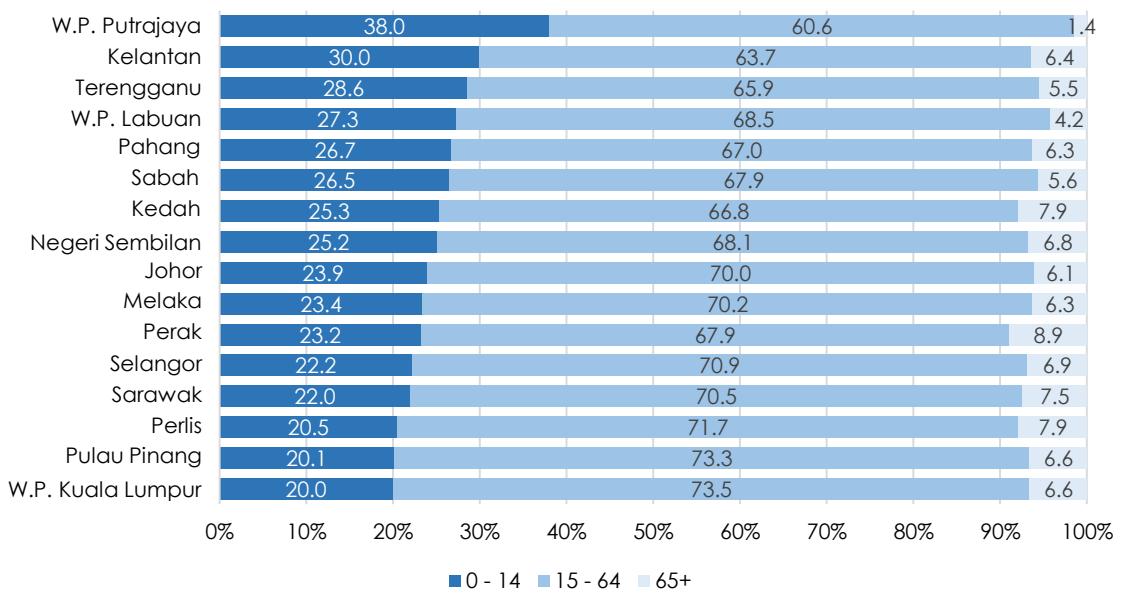

Penduduk kumpulan umur muda adalah hampir separuh daripada jumlah populasi untuk hampir kesemua negeri pada tahun 1970. Sabah merekodkan peratusan penduduk kumpulan umur muda paling tertinggi dengan 47.2 peratus. Sebaliknya, Perlis merekodkan peratusan penduduk kumpulan umur muda terendah di antara semua negeri dengan hanya 40.5 peratus.

Senario yang berbeza pula dilihat pada tahun 2020, di mana W.P. Kuala Lumpur mencatatkan peratusan terendah kumpulan umur muda dengan 20.0 peratus, diikuti Pulau Pinang (20.1%) dan Perlis (20.5%). Manakala peratusan terbesar penduduk usia muda yang didaftarkan oleh W.P. Putrajaya (38.0%), Kelantan (30.0%) dan Terengganu (28.6%).

Kesan penduduk umur muda kepada umur bekerja akan datang

Dalam tempoh peralihan demografi, penurunan kesuburan dan kematian menjadi elemen terpenting dalam perubahan komposisi umur penduduk. Secara amnya, trend penurunan umur muda dan peningkatan umur tua yang semakin ketara akan memberi kesan kepada bilangan dan tanggungan bagi umur bekerja pada masa akan datang.

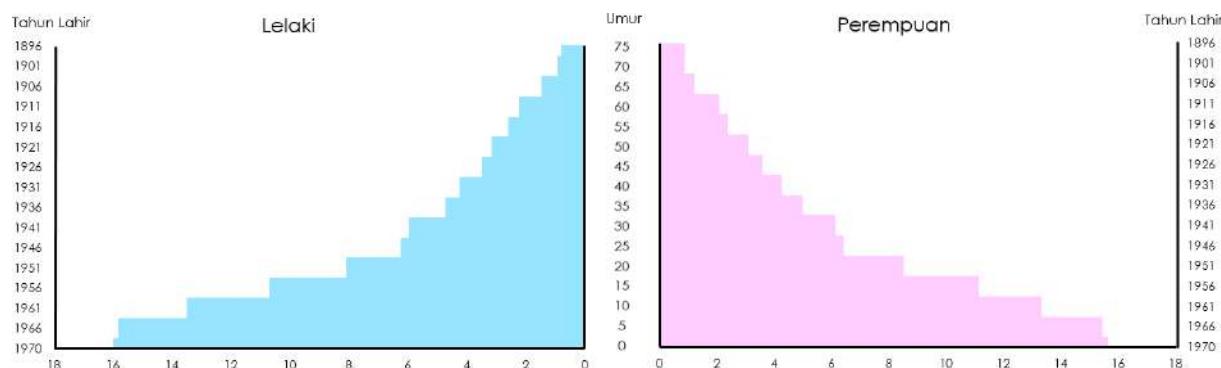

3. Takrifan generasi

Istilah "generasi" sukar untuk ditakrifkan dengan tepat kerana ia mempunyai lebih daripada satu makna. Takrifan yang digunakan dalam artikel ini sebahagian besarnya berdasarkan definisi generasi daripada Pew Research Center's iaitu kumpulan orang yang telah dibesarkan dalam sosial, ekonomi dan konteks politik yang boleh membentuk pandangan mereka terhadap dunia. Tahun kelahiran menentukan seseorang itu tergolong dalam generasi mana.

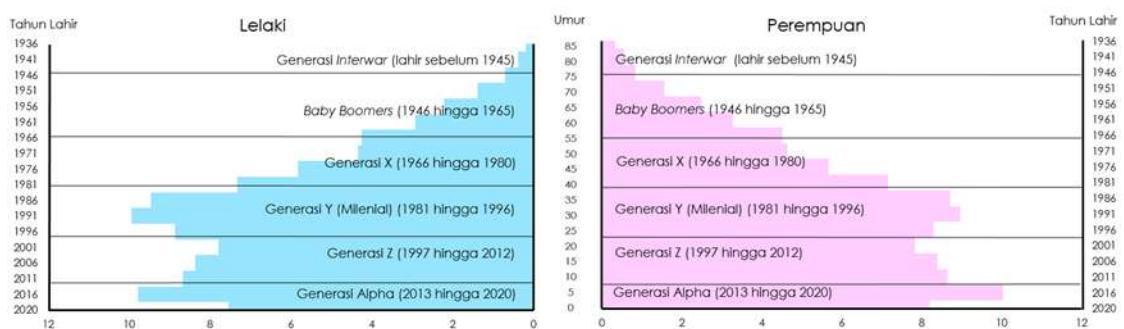

Bergantung pada kedudukan dalam kitaran hidup mereka, generasi ini juga mempengaruhi ekonomi dan masyarakat bukan sahaja kerana saiz mereka tetapi juga kerana nilai dan sikap mereka yang berbeza terhadap kehidupan. Generasi yang digunakan dalam artikel ini adalah seperti berikut:

- Generasi Interwar: penduduk berumur 75 tahun dan ke atas (lahir sebelum 1945);
- Generasi Baby Boomer: penduduk berumur 55 hingga 74 tahun (lahir antara 1946 dan 1965);
- Generasi X: penduduk berumur 40 hingga 54 tahun (lahir antara 1966 dan 1980);
- Generasi Y (milenium): penduduk berumur 24 hingga 39 tahun (lahir antara 1981 dan 1996)
- Generasi Z: penduduk berumur 8 hingga 23 tahun (lahir antara 1997 dan 2012);
- Generasi Alpha: penduduk berumur 7 tahun dan ke bawah (lahir antara 2013 dan 2020).

Rajah 1: Piramid penduduk Malaysia, 1970

Rajah 2: Piramid penduduk Malaysia, 2020

Milenial yang terdiri daripada penduduk yang berumur 24 hingga 39 tahun, merupakan penduduk terbesar di Malaysia. Bilangan penduduk dalam generasi ini ialah 9.1 juta, menyumbang kepada 28.1 peratus daripada jumlah penduduk. Ianya dikuti oleh Generasi Z, iaitu penduduk yang berumur 8 hingga 23 tahun, yang menyumbang sebanyak 8.8 juta penduduk (27.2%). Penduduk yang berumur 75 tahun dan ke atas (Generasi Interwar) merupakan penduduk paling sedikit dengan sumbangan sebanyak 0.7 peratus (2.0 juta) sahaja.

Komposisi dan struktur umur penduduk boleh digambarkan melalui piramid penduduk. Ia menunjukkan sumbangan penduduk dalam setiap kumpulan umur selari dengan jantina. Tapak piramid 1970-an yang luas menggambarkan bahawa Malaysia telah mengalami kesuburan yang tinggi dengan TFR 4.9 yang menunjukkan peratusan penduduk yang lebih tinggi daripada kumpulan umur muda berbanding dengan penduduk tua.

Walau bagaimanapun, pada tahun 2020, struktur umur penduduk Malaysia telah berubah secara radikal. Daripada bentuk piramid pada asalnya, bentuknya telah berubah dan tidak menggambarkan piramid lagi. Dari tahun 1970 hingga 2020, asas piramid penduduk telah mengecut dan beralih kepada generasi Milenial. Bentuk ini terbentuk kerana perubahan dalam kadar kesuburan dan kadar kematian dari tinggi ke rendah. Prestasi dalam pendidikan perempuan, peningkatan penyertaan dalam pasaran buruh, dan kejayaan program perancangan keluarga menyumbang kepada penurunan kesuburan.

Penduduk umur muda telah berkurangan dengan cepat manakala populasi warga tua semakin bertambah. Struktur umur diunjurkan mengecil di bahagian bawah dan meluas di bahagian atas semasa peralihan kesuburan dari tinggi ke rendah. Malaysia akan menghadapi populasi yang semakin tua dalam masa terdekat jika kesuburan kekal rendah dan asas piramid itu terus mampat.

4. Kesimpulan dan kajian lanjut

Pertumbuhan penduduk yang tidak diimbangi dengan momentum kenaikan penduduk mengikut kumpulan umur muda, umur bekerja dan umur tua yang sekata akan memberi impak kepada negara. Kesan ketidakseimbangan pertumbuhan penduduk ini akan mengakibatkan negara mengalami kurangan tenaga buruh dan boleh mengakibatkan masalah kepada sistem sosial negara.

Situasi generasi umur muda pada hari ini adalah amat berbeza berbanding generasi muda pada 50 tahun lalu. Kerajaan hendaklah merangka polisi dan inisiatif bersesuaian agar populasi generasi umur muda ini tidak terus berkurangan. Pihak berkuasa dengan sokongan Kerajaan juga perlu memegang tanggungjawab utama untuk menangani penurunan penduduk.

DEMOGRAPHIC TRANSITION: WHERE ARE THE YOUNG?

Muhammad Hazim Mohd Abd Rahim; Amerudin Abdul Ghani;
Nazaria Baharudin; Mohamad Shukor Mat Lazim

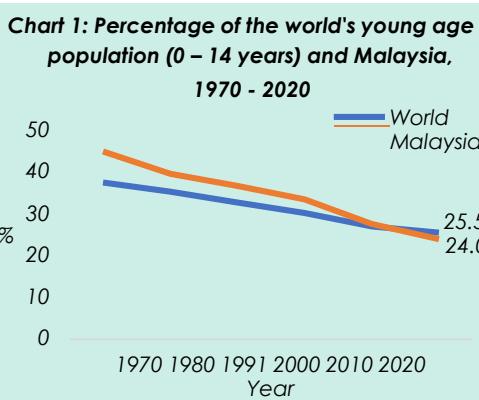

1. Who is the Young?

The World Health Organization classifies “young people” as adolescents and young people from 10 through 24 years of age. The United Nations defines youth as 15 to 24 years of age. In this article, we will discuss the age distribution of the Malaysian population for the age group of 0 to 14 years by state and sex using the key findings of the Malaysia Population and Housing Census 2020. The young age group is a very significant part of society and also an asset of the country as well as the backbone of the country's development in the future. This generation is seen to have potential in terms of competitiveness, thinking and of high spirit to ensure the sustainable development of the country.

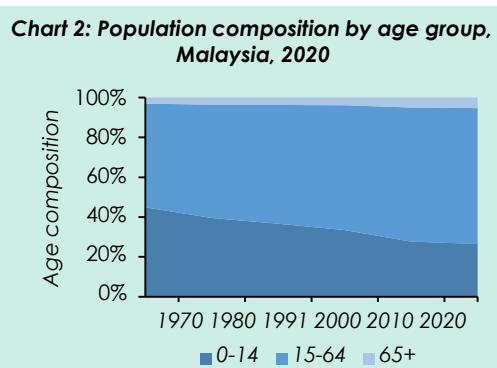

2. Distribution of the young age group population in Malaysia

Young age population in Malaysia and world

In 2020, there are 7.8 billion world population. From that figure, the world's young age group records a total of 2.0 billion, contributing to 25.5 per cent of the total world population. Meanwhile, based on the key findings of the 2020 Malaysia Population and Housing Census 2020 (MyCensus 2020), Malaysia's population is 32.4 million, with an average annual population growth rate of 1.7 per cent for the period 2010 to 2020. The percentage of the young age group population showed a declining pattern from 1970 to 2020 by recording 24.0 per cent in 2020 as compared to 44.9 per cent in 1970.

Young age population by age group and sex

The percentage of the young age population recorded a rapid declining trend for the period 1970 to 2020. The males population recorded a decrease from 45.3 per cent to 26.0 per cent. Meanwhile, the percentage of the females also recorded a decrease from 44.4 per cent to 26.9 per cent. In addition, based on 2010 – 2040 population projection, the young age population for males and females are projected to drop to 18.4 per cent and 18.9 per cent respectively.

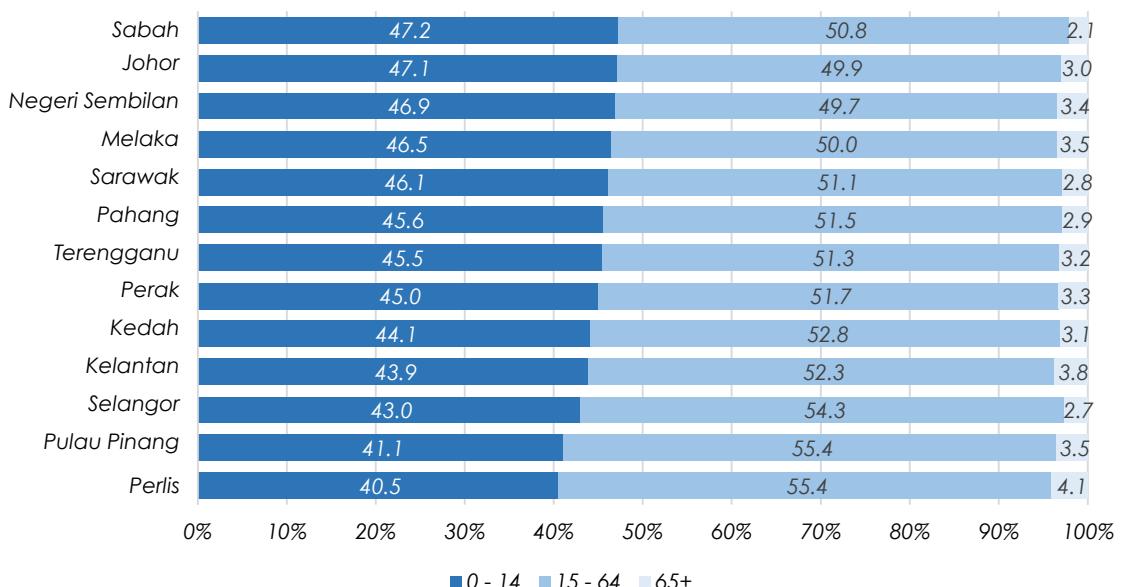

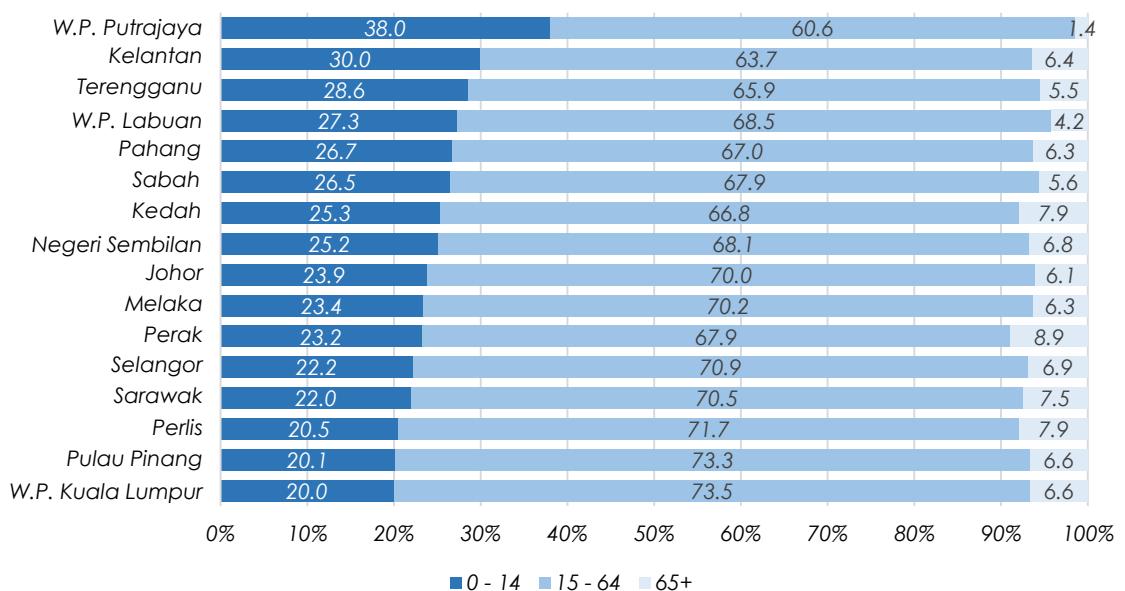

Chart 3: Percentage of population by age group and sex, 1970, 2020 and 2040

Young age population by age group and states

The population of the young age group was almost half of the total population for almost all states in 1970. Sabah recorded the highest percentage of the young age group population with 47.2 per cent. On the other hand, Perlis recorded the lowest percentage of the young age group population among all states with only 40.5 per cent.

It was a different scenario in 2020, where W.P. Kuala Lumpur recorded the lowest percentage of young age group with 20.0 per cent, followed by Pulau Pinang (20.1%) and Perlis (20.5%). Meanwhile the largest percentage of the young age population registered by W.P. Putrajaya (38.0%), Kelantan (30.0%) and Terengganu (28.6%).

Chart 4: Percentage of population by major age group and state, Malaysia, 1970**Chart 5: Percentage of population by major age group and state, Malaysia, 2020**

Impact of young age population to the future working age

During the period of demographic transition, declining fertility and mortality became the most important element in the change of age composition in the population. In general, the declining trend of young age and an increasingly significant increase in old age will affect the number and dependents for working age in the future.

3. Defining generations

The term "generation" is tough to define precisely because it can have more than one meaning. The definition used in this article is largely based on the Pew Research Center's definition: generations are cohorts of people who have grown up in a specific social, economic and political context that can shape their view of the world. The year of birth determines which generation a person belongs to.

Depending on where they are in their life cycle, these generations also influence the economy and society not only because of their size but also because of their distinct values and attitudes toward life. The generations used in this article are as follows:

- Interwar Generation: people aged 75 or older (born before 1945);
- Baby Boomer Generation: people aged 55 to 74 (born between 1946 and 1965);
- Generation X: people aged 40 to 54 (born between 1966 and 1980);
- Generation Y (millennials): people aged 24 to 39 (born between 1981 and 1996);
- Generation Z: people aged 8 to 23 (born between 1997 and 2012); and
- Generation Alpha: people aged 7 or younger (born between 2013 and 2020).

Figure 1: Population pyramid Malaysia, 1970

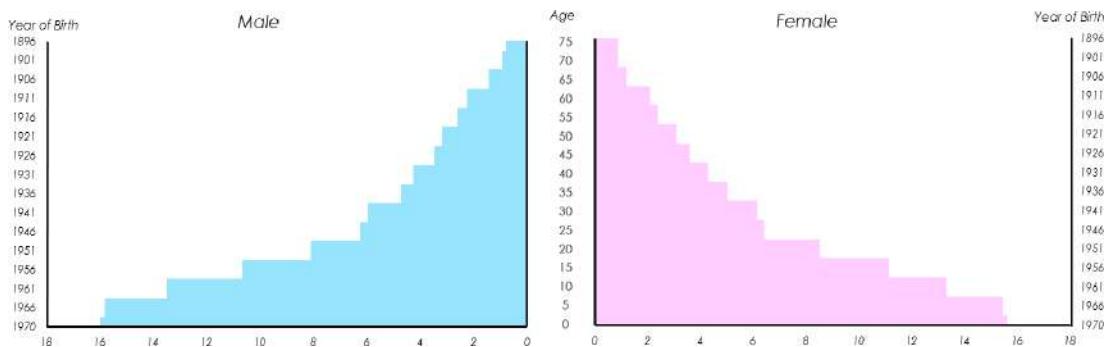

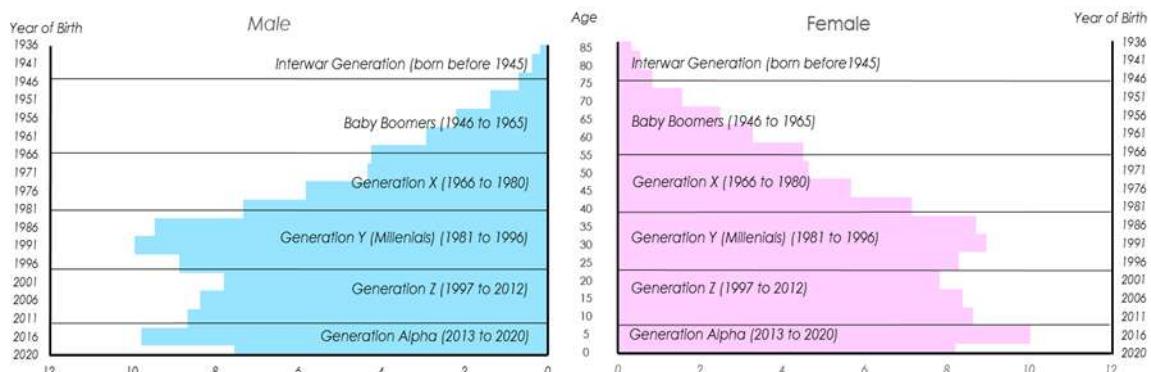

Figure 2: Population pyramid Malaysia, 2020

Millennials, comprising people aged 24 to 39, represent the largest population in Malaysia. The number of people in this generation was 9.1 million, contributing to 28.1 per cent of the total population. It is followed by Generation Z, which was aged 8 to 23 years, contributing 8.8 million people (27.2%). The people aged 75 years and above (Interwar Generation) were the smallest population in Malaysia which contributing only 0.7 per cent (2.0 million).

The composition and age structure of the population can be described through a population pyramid. It shows the share of the population in each age group with respect to sex. The wide base of 1970's pyramid illustrates that Malaysia had experienced high fertility with TFR of 4.9 which imitated the higher proportion of young aged group as compared to the elderly population.

However, in 2020, the Malaysian population's age structure has radically shifted. Rather than a pyramid, the shape was not reflected pyramid anymore. From 1970 to 2020, the base of the population pyramid has been shrinking and shifted to the Millennial generations. This shape was formed due to oscillations in fertility and death rates from high to low. The growth in women's education, increased participation in the labour market, and the success of family planning programmes contributed to the decrease in fertility.

The young age has rapidly decreased while the elderly population has grown. The age structure is projected to narrow at the bottom and broaden at the top during the fertility transition from high to low. Malaysia will face an ageing population in the near future if fertility remains low and the pyramid's base continues to compress.

4. Conclusions and further study

Population growth that is not balanced with the momentum of population growth by young age group, working age and old age evenly will have an impact on the country. The effect of this imbalance in population growth will result in the country experiencing a shortage of manpower and can lead to problems in the country's social system.

The situation of the young generation today is very different from the young generation 50 years ago. The government may formulate appropriate policies and initiatives so that the population of this younger generation does not continue to decline. Authorities with Government support also need to hold primary responsibility for addressing population decline.

Pengenalan

Pertumbuhan penduduk ialah pertambahan bilangan orang dalam sesuatu populasi atau kumpulan. Pertumbuhan penduduk dunia adalah berjumlah 83 juta setahun, atau 1.1 peratus setahun. Penduduk dunia telah berkembang daripada 1 bilion pada tahun 1800 kepada 7.9 bilion pada tahun 2020. Penduduk dunia semakin berkembang, walaupun pada kadar yang perlakan sejak tahun 1950, disebabkan oleh penurunan kadar kesuburan. Daripada anggaran 7.9 bilion penduduk pada 2020, penduduk dunia diunjurkan secara medium varian akan meningkat kepada 8.5 bilion pada 2030, 9.7 bilion pada 2050 dan 10.9 bilion pada 2100 (*World Population Prospect Report, United Nations, 2019*). Pertumbuhan penduduk dunia diunjurkan semakin menurun disebabkan oleh penurunan kadar kesuburan jumlah dari 5.0 pada 1960 kepada 2.3 pada 2020. Penurunan dalam kadar kesuburan telah berlaku di seluruh dunia dan proses ini dikenali sebagai transisi demografi.

Penduduk Malaysia mencatatkan pertumbuhan perlakan dengan kadar pertumbuhan tahunan sebanyak 1.7 peratus pada tahun 2020 berbanding 3.9 peratus pada tahun 1970. Pada tahun 2020, penduduk Malaysia merekodkan 32.4 juta, iaitu peningkatan tiga kali ganda berbanding tahun 1970 (10.4 juta). Jumlah penduduk Malaysia terdiri daripada 29.8 juta warganegara (91.7 peratus) dan 2.7 juta bukan warganegara (8.3 peratus). Bagi penduduk Warganegara, 52.5 peratus adalah lelaki, manakala 47.5 peratus adalah perempuan, dengan nisbah jantina 103 lelaki bagi setiap 100 perempuan. Bagi penduduk bukan warganegara pula, 61.9 peratus penduduk adalah lelaki berbanding 38.1 peratus penduduk perempuan, dengan nisbah jantina 229 lelaki bagi setiap 100 perempuan. Komposisi penduduk mengikut etnik pada tahun 1970 adalah Bumiputera 5.8 juta (55.8 peratus), Cina 3.6 juta (34.1 peratus), India 936.3 ribu (9.0 peratus) dan Lain-lain 117.0 ribu (1.1 peratus). Pada tahun 2020, penduduk Bumiputera masih majoriti iaitu 20.6 juta (69.4 peratus), Cina 6.9 juta (23.2 peratus), India 2.0 juta (6.7 peratus), Lain-lain 215.6 ribu (0.7 peratus) dan bukan warganegara, 2.7 juta (8.3 peratus). Walaupun bilangan orang Cina dan India telah meningkat, peratus sumbangan mereka kepada jumlah penduduk telah menurun.

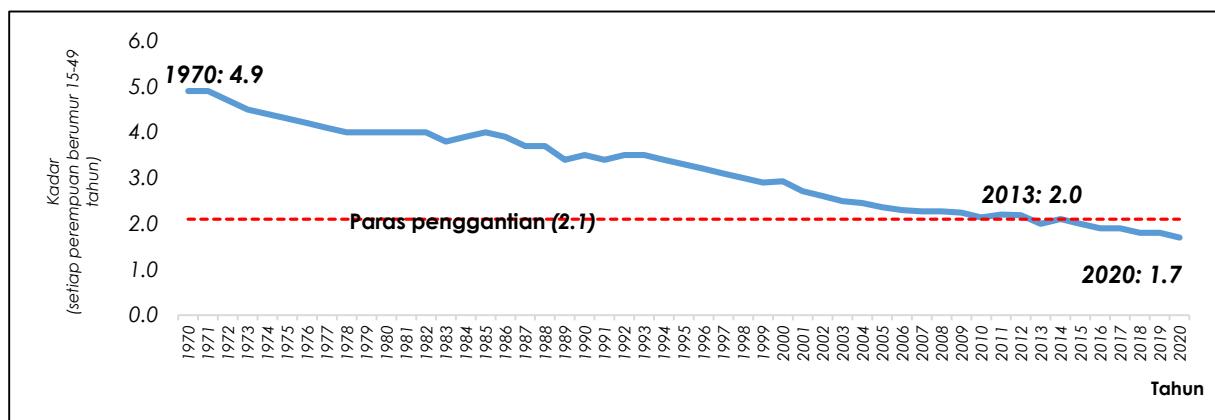

Terdapat empat faktor yang mempengaruhi pertumbuhan penduduk iaitu kadar kesuburan, kadar kematian (jangka hayat), struktur umur (agihan di antara umur muda dan umur tua) dan migrasi. Artikel ini membincangkan mengenai keempat-empat faktor yang mempengaruhi perubahan populasi di Malaysia daripada 1970 ke 2040. Artikel ini akan mengetengahkan trend utama mengenai senario pertumbuhan penduduk, jangkaan yang akan berlaku pada masa hadapan dan mengenal pasti titik kelemahan berdasarkan data demografi banci Malaysia.

Kesuburan terus mencatatkan penurunan

Menurut *United Nations Population Division*, kadar kesuburan di seluruh dunia dianggarkan akan terus mencatatkan penurunan dalam dekad akan datang dan secara perlahan menuju kepada 2.1 anak bagi seorang wanita, yang secara tradisinya dilihat sebagai “paras penggantian” yang diperlukan untuk mengekalkan penduduk yang stabil di negara-negara yang mempunyai kadar kematian yang rendah di kalangan golongan muda.

Sepanjang setengah abad yang lalu, kadar kesuburan di Malaysia telah jatuh dengan mendadak. Dalam tempoh 1970 sehingga 1980, seorang wanita secara puratanya akan melahirkan empat orang anak sepanjang umur produktifnya. Namun, bagi tempoh 2010 sehingga 2020, secara puratanya adalah dua orang anak bagi setiap wanita berumur 15-49 tahun. Kadar Kesuburan Jumlah (TFR) bagi seorang wanita di Malaysia dalam tempoh reproduktif telah menurun kepada 1.7 bayi pada tahun 2020 berbanding 4.9 bayi pada 1970. TFR ini merupakan yang terendah dalam tempoh lima dekad ini. Berdasarkan kepada *Manual Principles and Recommendations for A Vital Statistics (Revision 3)*, *United Nations Statistics Division (2014)*, paras penggantian kesuburan adalah pada 2.1 anak bagi setiap wanita. Nilai ini mewakili purata bilangan anak yang perlu dilahirkan oleh seorang wanita dengan menanggung seorang anak perempuan yang hidup sehingga anak tersebut melahirkan anak. Jika paras penggantian kesuburan kekal dalam tempoh yang panjang, setiap generasi secara tepat akan menggantikan dirinya tanpa mengambil kira migrasi penduduk.

Bagi tempoh 1970 hingga 2020, TFR bagi semua kumpulan etnik di Malaysia menunjukkan trend menurun. Etnik Bumiputera mencatatkan penurunan TFR daripada 5.0 bayi kepada 2.2 bayi, Cina (4.7 bayi kepada 1.0 bayi) dan India (4.8 bayi kepada 1.2 bayi) pada tahun 2020. Etnik Cina dan India merekodkan TFR di bawah paras penggantian masing-masing bermula tahun 2003 dan 2005.

Wanita memainkan peranan yang penting dalam menentukan bilangan dan kadar kelahiran di dalam negara. Trend penurunan dalam kelahiran disumbangkan oleh peningkatan tahap pendidikan dalam kalangan wanita dan peningkatan kadar penyertaan tenaga buruh bagi wanita. Pada tahun 2020, kadar penyertaan tenaga buruh wanita adalah 55.3 peratus. Selain itu, beberapa faktor lain seperti peningkatan purata umur perkahwinan pertama, pembandaran, perubahan gaya hidup, status ekonomi dan peningkatan penggunaan kaedah perancang keluarga juga merupakan penyumbang kepada penurunan trend kelahiran. Bilangan ibu bagi kelahiran pertama pada tahun 2020 adalah 139,501 ibu, turun 12.7 peratus berbanding 2019 (159,710 ibu). Sementara itu, purata umur ibu pada kelahiran hidup pertama meningkat 0.6 tahun daripada 27.4 tahun (2000) kepada 28.0 tahun pada 2020. Secara umumnya, peningkatan purata umur ibu pada kelahiran hidup pertama merupakan satu petunjuk kepada tempoh reproduksi wanita yang semakin pendek.

Peningkatan Jangkaan Hayat

Jangkaan hayat ketika lahir adalah anggaran seseorang dijangka dapat hidup. Berdasarkan United Nation, jangkaan hayat ketika lahir meningkat daripada 48 tahun pada tempoh 1950-1955 kepada 69 tahun pada 2010-2015 dan dijangka terus meningkat dalam tempoh empat dekad akan datang (*World Population Prospect Report, United Nations, 2019*). Penduduk di kebanyakan negara hidup lebih lama disebabkan peningkatan akses kepada penjagaan kesihatan, peningkatan dalam diet dan kebersihan, keberkesanan respon kepada penyakit berjangkit dan faktor-faktor lain.

Seorang bayi yang baru lahir pada tahun 2021 secara purata dijangka hidup 12 tahun lebih lama berbanding lima dekad yang lalu, 63.6 tahun (1970). Di Malaysia, peningkatan purata jangkaan hayat kepada 75.6 tahun disumbangkan oleh faktor positif sosioekonomi seperti peningkatan taraf pendidikan, pekerjaan, tahap penjagaan kesihatan dan penurunan kadar kematian. Sementara itu, bagi perbandingan di antara jantina, secara puratanya, bayi perempuan dijangka hidup lebih lama berbanding bayi lelaki dengan peningkatan jangkaan hayat 12.7 tahun berbanding lelaki 11.6 tahun bagi tempoh 1970 hingga tahun 2021. Ini bermakna, seorang bayi perempuan yang baru lahir pada 2021 secara purata dijangka boleh hidup sehingga 78.3 tahun manakala bayi lelaki dijangka boleh hidup sehingga 73.2 tahun. Antara faktor yang menyumbang adalah perbezaan cara hidup lelaki dan perempuan yang mana lelaki lebih terdedah kepada *nature of work* yang berisiko. Peningkatan jangkaan hayat adalah selari dengan sistem perkhidmatan kesihatan yang baik dan kesedaran penduduk terhadap kepentingan menjaga kesihatan yang semakin meningkat.

Carta 4: Jangkaan hayat ketika lahir mengikut jantina, Malaysia, 1991-2021^e

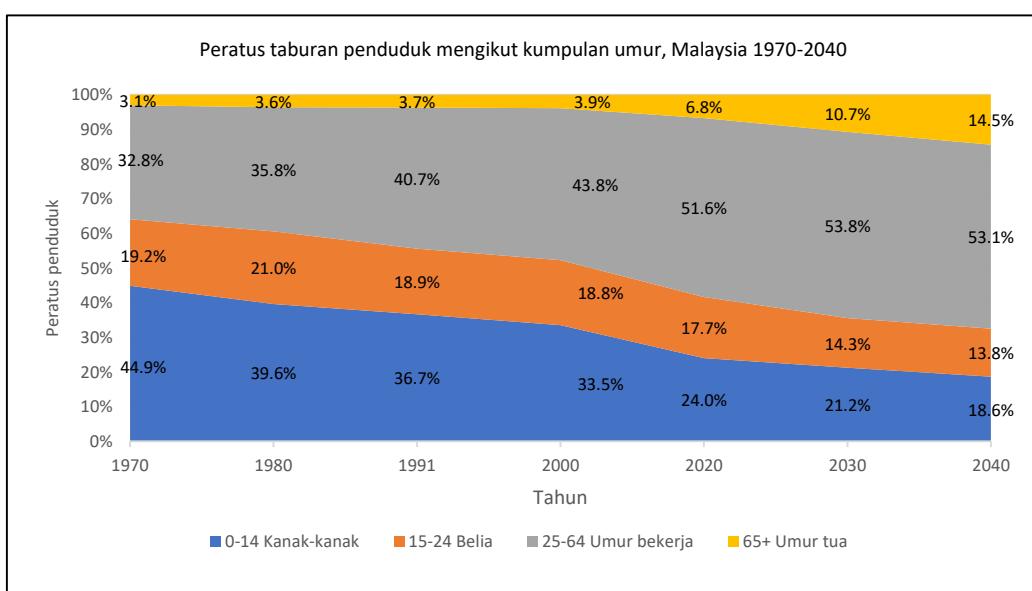

Sumber: Jabatan Perangkaan Malaysia

Jangkaan hayat yang meningkat menunjukkan Malaysia akan berhadapan dengan penuaan penduduk pada tahun 2030, yang mana peratus penduduk berumur 60 tahun dan ke atas telah mencapai 15.3 peratus dari jumlah penduduk. Penuaan penduduk bukan sahaja memberi kesan kepada ekonomi negara, malah individu. Justeru itu, persediaan kesihatan dan simpanan kewangan yang mencukupi perlu dibuat bagi mengelak kesukaran hidup selepas persaraan.

Perubahan Taburan Struktur Umur

Perubahan taburan umur penduduk yang perlahan adalah merupakan ciri utama transisi demografi daripada tahap kesuburan dan kematian yang tinggi kepada yang semakin rendah. Transisi demografi adalah fenomena sejahtera, yang mana dunia kini menunjukkan kadar pertumbuhan penduduk yang semakin perlahan bagi kanak-kanak dan belia, manakala penduduk berumur 65 tahun dan ke atas semakin meningkat (*Changing population age structures and sustainable development, United Nations, 2017*).

Carta 5: Peratus taburan penduduk mengikut kumpulan umur, Malaysia 1970-2040

Sumber: Jabatan Perangkaan Malaysia

Bagi tempoh 1970 sehingga 2020, peratus kanak-kanak di bawah umur 15 tahun (umur muda) menunjukkan trend penurunan daripada 44.9 peratus pada tahun 1970 kepada 24.0 peratus pada tahun 2020. Pada masa kini, kanak-kanak berumur 15 tahun mewakili 1 daripada 4 orang di Malaysia. Nisbah ini dianggarkan akan semakin menurun kepada 1 daripada 5 orang pada tahun 2030.

Penduduk umur muda di Malaysia yang berumur 15 hingga 24 tahun, meningkat dua kali ganda daripada 2.0 juta pada tahun 1970 kepada 5.3 juta pada tahun 2020. Kumpulan umur ini diunjurkan akan menurun secara perlahan-lahan dengan peratusan jumlah penduduk daripada 19.2 peratus pada masa ini menurun kepada 13.8 peratus pada tahun 2040.

Peratusan penduduk umur bekerja 15-64 tahun menunjukkan peningkatan daripada 52.1 peratus pada tahun 1970 kepada 69.3 peratus pada tahun 2020. Trend pertumbuhan ini disumbangkan oleh umur bekerja yang berumur 25 tahun sehingga 64 tahun yang meningkat daripada 32.8 peratus kepada 51.6 peratus pada 2020. Ia diunjurkan meningkat secara perlahan-lahan dengan 53.1 peratus jumlah Penduduk pada tahun 2040. Bilangan umur bekerja di Malaysia diunjurkan akan meningkat sedikit pada dekad akan datang, walau bagaimanapun ianya hanya mencatatkan penurunan kepada sumbangan peratusan kepada jumlah penduduk. Sekiranya penurunan yang berterusan dalam kumpulan umur ini, dijangkakan Malaysia akan berhadapan dengan kekurangan tenaga buruh pada masa akan datang.

Di samping itu, peratusan penduduk warga tua (umur 65 tahun dan ke atas) juga menunjukkan peningkatan daripada 3.1 peratus pada 1970 kepada 6.8 peratus pada 2020. Situasi ini berkait rapat dengan beberapa faktor yang menyumbang kepada peningkatan penduduk tua di Malaysia seperti peningkatan jangkaan hayat bagi lelaki dan perempuan. Perkadaran bagi baby-boomer's (individu yang lahir di antara tahun 1946 hingga 1964) telah beralih kepada fasa yang berumur 65 tahun ke atas dan kadar kesuburan yang rendahdi bawah paras penggantian (2.1 anak bagi setiap wanita berumur 15-49 tahun) di peringkat nasional. Kesuburan yang semakin berkurangan dan peningkatan jangkaan hayat telah membawa kepada perubahan struktur umur yang ketara. Median umur penduduk Malaysia telah meningkat dari 17.6 tahun pada 1970 kepada 29.2 tahun pada 2020 dan dianggarkan akan mencapai umur 36.3 tahun pada 2040. Saiz kohort penduduk umur bekerja dan umur tua yang besar telah menyebabkan peningkatan median umur pada tahun 2020.

Migrasi

Dalam tempoh jangka panjang, migrasi boleh memberi perubahan kepada struktur penduduk. Pada tahun 2020, bilangan migrasi antarabangsa di Malaysia meningkat kepada 2.2 peratus dalam tempoh 2010-2020. Di bawah penjajahan British, migran Cina datang dalam jumlah yang semakin meningkat pada abad ke-19 dan 40 tahun pertama abad ke-20. Mereka pada mulanya terlibat terutamanya dalam aktiviti perdagangan dan perniagaan, dan kemudian terlibat dengan aktiviti perlombongan dan pertanian (*Striving for inclusive development, from Pangkor to a modern Malaysian state, Sultan Nazrin Shah, 2020*). Migran India pula pada mulanya di bawa ke semenanjung Tanah Melayu untuk aktiviti penanaman gula, kopi, ubi kayu dan kemudiannya tanaman getah. Sebahagian daripada pendatang ini berasimilasi ke dalam masyarakat dan kemudiannya menjadi warganegara.

Menurut kajian oleh Dr. Anjli Doshi-Gandhi, 2013, Malaysia merupakan salah satu destinasi utama bagi penduduk miskin di negara-negara berhampiran disebabkan oleh keadaan ekonomi dan pertumbuhan ekonomi di Malaysia. Malaysia telah menerima hampir 1.6 juta pekerja asing daripada keseluruhan 12.3 juta tenaga buruh di Malaysia pada tahun 2011. Pekerja asing ini adalah terdiri dari negara ASEAN seperti Indonesia, Thailand, Philippines dan Myanmar. Kebanyakan daripada mereka adalah terlibat dalam sektor pembuatan, perladangan, pembinaan dan pertanian. Migrasi antarabangsa telah memberikan pelbagai isu dan cabaran kepada negara asal atau negara destinasi). Migrasi telah memberi kesan kepada ekonomi, pendidikan, kesihatan, keselamatan, masyarakat dan keluarga.

Kesimpulan

Penemuan utama artikel ini menunjukkan bahawa struktur penduduk di Malaysia telah berubah secara drastik dari tahun 1970 kepada 2020 dan ke arah 2040. Penurunan kadar kesuburan dan kadar kematian telah menyebabkan peningkatan kepada jangkaan hayat penduduk dan memberi kesan kepada penuaan penduduk di Malaysia. Pertumbuhan penduduk semasa adalah penting untuk memberi tumpuan kepada isu kependudukan yang dijangka berlaku pada masa hadapan terutamanya berkenaan isu-isu baru yang memberi kesan kepada perubahan demografi, impak kepada pasaran buruh dan masyarakat.

MALAYSIA'S POPULATION GROWTH IS SLOWING DOWN

Nazaria Baharudin; Mohamad Shukor Mat Lazim; Nur Azmina Ahmad Zuhkhori;
Amerudin Abdul Ghani; Rosmiyawati Anwar

Introduction

Population growth is the increase in the number of people in a population or dispersed group. Global human population growth amounts to around 83 million annually, or 1.1% per year. The global population has grown from 1 billion in 1800 to 7.9 billion in 2020. The world's population continues to grow, albeit at a slower pace than at any time since 1950, owing to reduced levels of fertility. From an estimated 7.9 billion people worldwide in 2020, the medium-variant projection indicates that the global population could grow to around 8.5 billion in 2030, 9.7 billion in 2050, and 10.9 billion in 2100 (World Population Prospect Report, United Nations, 2019). World Population growth has projected a declining trend mainly due to the decline in the global total fertility rate, from 5.0 in 1960 to 2.3 in 2020. The decline in the total fertility rate has occurred in every region of the world and is a result of a process known as demographic transition.

Malaysia's population also shows the same trend as the world's population growth. Its population continues to grow in a slower pace with an annual growth rate 1.7 per cent in 2020 as compared to 3.9 per cent in 1970. In 2020, Malaysia's population was 32.4 million, a threefold increase from 1970 (10.4 million). The total population comprises of 29.8 million (91.7%) Citizens and 2.7 million (8.3%) Non-Citizens. For Citizens, there are 52.5 per cent males and 47.5 per cent females with a sex ratio of 103 males for every 100 females. For Non-Citizens, there are 61.9 per cent males as compared to 38.1 per cent females with a sex ratio of 229 males for every 100 females. The composition of the population by ethnicity in 1970 was Bumiputera 5.8 million (55.8%), Chinese 3.6 million (34.1%), Indians 936.3 thousand (9.0%) and Others 117.0 thousand (1.1%). In 2020, Bumiputera population was still the majority at 20.6 million (69.4%), Chinese 6.9 million (23.2%), Indians 2.0 million (6.7%), Others 215.6 thousand (0.7%) and Non-Citizens 2.7 million (8.3%). Though the number of Chinese and Indians increased, their share to overall population have declined.

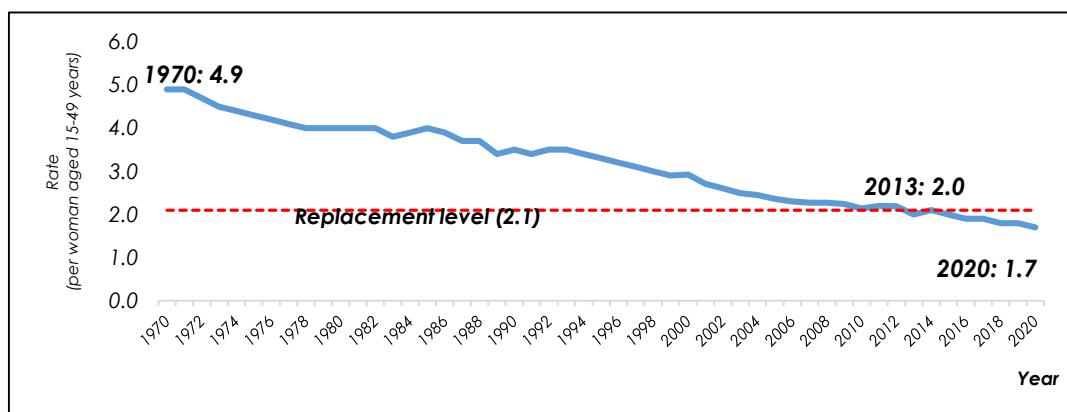

There are four main factors driving population growth that are fertility rates, life expectancy, age structure (the distribution between young and old person) and migration. This article presents an overview of these four main drivers of population change in Malaysia from 1970 to 2040. It highlights important trends, discusses key assumptions about the future and acknowledges weak spots in the demographic data based on the latest Malaysia census data.

Continuous drop in fertility

According to the United Nations Population Division, worldwide fertility rates are expected to continue to drop in the decades to come, gradually moving toward 2.1 children per woman, which is traditionally viewed as the “replacement level” needed to maintain a stable population in countries with low mortality rates among the young.

Over the last half century, the Malaysia fertility rate has fallen sharply. In the 1970 to 1980 period, on average a woman is expected to have about four children over the course of her productive age. By 2010-2020, the average for Malaysia was about 2.0 children per woman. The Total Fertility Rate (TFR) of woman in reproductive age in Malaysia declined to 1.7 babies in 2020 as compared to 4.9 babies in 1970. This was the lowest TFR in five decades. Malaysia's fertility rate was below the replacement level of 2.1 babies since 2013. Based on the Principles and Recommendations for A Vital Statistics (Revision 3), United Nations Statistics Division (2014) manual, the replacement level of 2.1 babies is the average number of children a woman would need to give birth by bearing a daughter who survives to childbearing age. If replacement level of fertility is sustained over a sufficiently long period, each generation will exactly replace herself and her partner regardless of population migration.

For the period 1970 to 2020, the TFR for all major ethnic groups in Malaysia has shown a declining trend. The TFR for Bumiputera declined from 5.0 babies to 2.2 babies, Chinese (4.7 babies to 1.0 babies) and Indians (4.8 babies to 1.2 babies) in 2020. The TFR for Chinese and Indians recorded below the replacement levels starting 2003 and 2005 respectively.

Women play a very important role in determining the number and rate of births in a country. This declining trend in births was contributed by the increase in women's level of education and the increase in women's participation in the labour force. In 2020, female's labour force participation rate (LFPR) was 55.3 per cent. In addition, factors such as the increase in average age of first marriage, urbanisation, lifestyle changes, economic status and increased use of family planning methods also contributes to the declining trend of births. The number of mothers at first live birth was 139,501 (2020) mothers, dropped 12.7 per cent as compared to 2019 (159,710 mothers). Meanwhile, the average age of mother at first live birth rose 0.6 years from 27.4 years (2000) to 28.0 years in 2020. In general, an increase in the average age of mother at first birth gives an indication of shorter reproductive period of women.

Rising Life Expectancy

Life expectancy at birth is an estimate of the expected life span of an average newborn child. According to the United Nations, global life expectancy at birth increased from 48 years in the 1950 to 1955 period to 69 years in 2010-2015 and it is expected to continue to rise over the next four decades (World Population Prospect Report, United Nations, 2019). People in many countries are living longer due to increase access to healthcare, improvements in diet and hygiene, effective responses to infectious disease, and many other factors.

A baby born in 2021 on average is expected to live about 12 years longer than five decades ago, 63.6 years (1970). In Malaysia, the increase in average Life Expectancy to 75.6 years is contributed by positive factors in socioeconomic such as improved in standard of education, employment, health care and decline in mortality rate. Meanwhile, in terms of comparison by gender, on average baby girls live longer than boys with an increase in life expectancy of 12.7 years as compared to boys, 11.6 years for the period 1970 to 2021. This means, baby girl born in 2021 on average is expected can live up to 78.3 years while baby boys are expected to live up to 73.2 years. Among the contributing factors are the differences in the lifestyles of males and females whereby males are more exposed to hazardous nature of work. The increase in life expectancy is in line with an improved health service system and public awareness on the importance of maintaining good health.

Chart 4: Life expectancy at birth by sex, Malaysia, 1990-2021^e

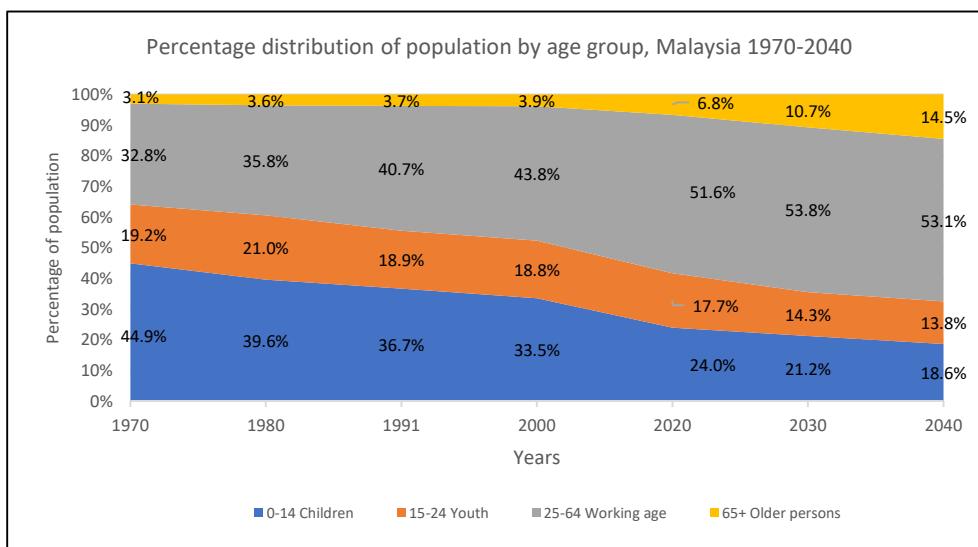

Source: Department of Statistics, Malaysia

The continuous increase in life expectancy indicates Malaysia will experience an ageing population in 2030, where the percentage of the population aged 60 years and over, reach 15.3 per cent of the total population. Population ageing will not only affect the economy but also individuals. Therefore, health provisions and sufficient funds should be prepared to avoid difficulties after retirement.

The distribution of Age Structural shift

Gradual changes in the population age distribution is a key feature of the demographic transition from relatively high to relatively low levels of fertility and mortality. The demographic transition is a universal phenomenon, the world is now seeing a relatively slow pace of growth in the population of children and youth, whilst the population aged 65 years and over is growing more rapidly (Changing population age structures and sustainable development, United Nations, 2017).

Chart 5: Percentage distribution of population by age group, Malaysia 1970-2040

Source: Department of Statistics, Malaysia

In the period of 1970 to 2020, the percentage of children under age 15 (young age) showed a declining trend from 44.9 per cent in 1970 to 24.0 per cent in 2020. Nowadays, children under age 15 make up 1 in 4 persons in Malaysia. It is projected to decline further to around 1 in 5 persons soon after 2030.

The Malaysia's population of youth, aged 15 to 24 years, has doubled from 2.0 million in 1970 to 5.3 million in 2020. In terms of share to total population, it is projected to drop slowly from 19.2 per cent at present to 13.8 per cent in 2040.

The percentage of working age population, aged 15-64 years, as a whole also showed an increase from 52.1 per cent in 1970 to 69.3 per cent in 2020. More precisely, this growing trend has been contributed by the working age cohort 25 to 64 years which was increased from 32.8 per cent to 51.6 per cent in 2020. It is projected to increase slowly with 53.1 per cent of the total population in 2040. The number of working age in Malaysia is projected to rise slightly in future decades, while declining as a share of the total population. Continuous decline of this age group will have an impact on supply of labour in the future.

On the other hand, the percentage of the elderly population (aged 65 and above) increased from 3.1 per cent in 1970 to 6.8 per cent in 2020. This situation is related to a few factors that contribute to the increase of old-age population in Malaysia such as the increase of life expectancy for both sexes, the proportion of baby-boomer's (people who are born between 1946-1964) that has shifted to the cohort of more than 65 years and low fertility rates that is below the replacement level (2.1 children per woman aged 15-49 years). Continuous decline in fertility declines and rising life expectancy have led to significant age structural shifts. The median age of the population increased from 17.6 years in 1970 to 29.2 years in 2020 and it is projected to reach 36.3 years in 2040. Larger cohort size of working-aged and older-aged population have led to the increase of the median age in 2020.

Migration

Over time, migration can significantly change the Malaysia population structure. In 2020, the number of international migrants in Malaysia increased to 2.2 per cent for the 2010–2020 period. Under British colonialism, Chinese migrants came in increasing numbers during the 19th century and the first 40 years of the 20th century. They were initially engaged mainly in trade and commerce, but later expanded into mining and agriculture (Striving for inclusive development, Sultan Nazrin Shah, 2020). The Indians, on the other hand, was initially brought to the Malay peninsula for sugar, coffee, tapioca plantations and later, rubber plantations. Some of these migrants assimilate into society and later become citizens.

According to a study by Dr. Anjali Doshi-Gandhi, 2013, due to its economic prosperity and rapid economic growth over the decades, Malaysia has become one of the major destinations for poorer citizens of neighbouring countries. It hosted approximately 1.6 million foreign workers out of a total workforce of 12.3 million in 2011. These foreign workers are mainly from ASEAN member countries such as Indonesia, Thailand, Philippines and Myanmar. Most of them are involved in sectors such as manufacturing, plantation, construction and agriculture. International migration has resulted in an array of issues and challenges to the country or place of origin as well as the country or place of destination. Migration has had an impact on the economy, education, health, security, community and family.

Conclusion

The principal findings of this article indicates that population structure in Malaysia had changed dramatically from the year 1970 to 2020 and towards 2040. The decline in fertility and mortality rates have led to an improvement in the life expectancy of the population and thus ageing population in Malaysia. The current population growth is important to focus on the population issues that are expected to occur in the future especially the new issues that will arise as a result of demographic changes and its impact on the labour market and society.

NOTA TEKNIKAL

TECHNICAL NOTES

PENDAHULUAN

Banci Penduduk dan Perumahan Malaysia 2020 (Banci Malaysia 2020) adalah banci keenam yang dilaksanakan semenjak penubuhan Malaysia pada tahun 1963. Banci terdahulu telah dijalankan pada tahun 1970, 1980, 1991, 2000 dan 2010. Objektif pelaksanaan Banci Malaysia 2020 adalah untuk mendapatkan stok dan profil penduduk dan perumahan yang komprehensif dan terperinci sehingga ke peringkat geografi terkecil pada suatu masa sebagai penanda aras bagi ciri-ciri demografi dan sosio-ekonomi penduduk. Data banci menjadi asas dalam pemantauan arah aliran penduduk dan perumahan untuk perancangan pembangunan negara.

Kerajaan Persekutuan bertanggungjawab untuk melaksanakan banci dan dijalankan mengikut peruntukan yang terkandung dalam Akta Banci 1960 (Disemak-1969). Jabatan Perangkaan Malaysia telah dipertanggungjawabkan untuk menjalankan Banci Malaysia 2020 dengan kerjasama dan penyertaan sepenuhnya beberapa Kerajaan Negeri dan agensi Kerajaan Persekutuan. Tujuan laporan ini ialah untuk membekalkan maklumat utama berkaitan bilangan tempat kediaman, isi rumah dan penduduk di peringkat negeri, daerah pentadbiran, parlimen dan dewan undangan negeri di Malaysia.

Data dalam penerbitan ini merupakan banci Banci Malaysia 2020. Data bagi tahun 1970, 1980, 1991, 2000 dan 2010 pula merujuk kepada angka muktamad.

Banci Malaysia 2020 merupakan satu projek pengumpulan data yang kompleks. Oleh itu, kemungkinan berlakunya ralat liputan dan ralat kandungan tidak dapat dielakkan. Dari segi ralat liputan, sebilangan tempat kediaman, isi rumah atau penduduk mungkin tertinggal, tersalah hitung atau berlaku duplikasi penghitungan. Ralat kandungan pula berasaskan salah lapor jantina, umur, warganegara, taraf perkahwinan, agama dan kumpulan etnik. Bagi menganggarkan kedua-dua ralat tersebut, Survei Penilaian Liputan Banci (SPLB) dilaksanakan selepas selesai pembancian, sebagaimana disarankan oleh Pertubuhan Bangsa-Bangsa Bersatu

(PBB) dalam manual bertajuk *Principles and Recommendations for Population and Housing Censuses, Revision 3*, (UNSD, 2015). Kadar kurang penghitungan bagi Banci Malaysia 2020 hanya dapat diketahui setelah selesai prosesan data SPLB. Penerbitan ini menyediakan data penduduk, isi rumah dan tempat kediaman daripada Banci Malaysia 2020 mengikut ciri-ciri asas demografi seperti jantina, kumpulan umur, kumpulan etnik, agama, taraf perkahwinan dan kewarganegaraan di peringkat negeri, daerah pentadbiran (DP) dan mukim.

KAWASAN GEOGRAFI

Banci Malaysia 2020 meliputi semua negeri di Malaysia. Setiap negeri dibahagikan mengikut DP masing-masing. Bagi tujuan operasi banci, unit pembancian kecil iaitu blok penghitungan (BP) telah dibentuk yang mengandungi secara puratanya 80 hingga 120 tempat kediaman dengan anggaran penduduk seramai 500 hingga 600 orang. Lebih kurang 80 hingga 120 BP membentuk satu daerah banci (DB).

Malaysia terdiri daripada tiga belas buah negeri dan tiga wilayah persekutuan. Setiap negeri dibahagikan kepada beberapa DP. Bagi Kelantan, peringkat DP dikenali sebagai 'Jajahan'. Setiap DP dipecahkan kepada mukim. Jenis struktur pentadbiran ini terpakai untuk semua negeri kecuali Kelantan, Sabah, Sarawak, W.P. Labuan dan W.P. Putrajaya. Dalam hal ini, negeri Kelantan terdapat tiga peringkat pentadbiran iaitu jajahan, daerah dan mukim. Bagi negeri Sabah, tidak wujud peringkat mukim, manakala bagi negeri Sarawak beberapa DP dipecahkan kepada daerah kecil. W.P. Labuan dan W.P. Putrajaya tidak mempunyai mukim atau sub bahagian lain sebagai satu unit pentadbiran. Senarai Mukim bagi setiap negeri adalah berdasarkan senarai yang telah dibekalkan oleh Jabatan Ukur dan Pemetaan Malaysia (JUPEM).

Pada Banci Malaysia 2020, seorang pembanci dipertanggungjawab untuk menyelesaikan satu BP secara purata. Seorang penyelia akan memantau pembanci bagi tiga lingkungan banci (LB) yang setiap satunya mengandungi lebih kurang tujuh BP. Seorang Penguasa Daerah akan bertanggungjawab untuk satu DB yang mengandungi lebih kurang 15 LB. Semua Penguasa Daerah dalam setiap DP adalah di bawah tanggungjawab Penolong

Pesuruhjaya Banci. Timbalan Pesuruhjaya Banci di peringkat negeri pula bertanggungjawab ke atas semua Penolong Pesuruhjaya Banci di negeri masing-masing dan beliau bertanggungjawab terus kepada Pesuruhjaya Banci. Bagi melancarkan operasi banci, di setiap daerah juga mempunyai pegawai yang dilantik sebagai pegawai MyAD dan MyCD yang bertanggungjawab dalam aspek teknikal dan membantu memantau perjalanan operasi di lapangan. Sementara itu, daripada aspek latihan setiap pembanci dan penyelia diberikan latihan yang secukupnya sama ada melalui bengkel latihan mahupun melalui atas talian, iaitu program latihan *Malaysia Statistics Ubiquitous Learning (MySUL)*.

Organisasi banci di peringkat negeri dan kawasan geografi untuk tujuan banci adalah seperti berikut:

Jawatan	Kawasan Dipertanggungjawabkan
Timbalan Pesuruhjaya	Ibu Pejabat dan Negeri
Timbalan Pesuruhjaya (Teknikal)	Negeri
Penguasa Daerah	Daerah Banci
Penyelia	Lingkungan Banci
Pembanci	Blok Penghitungan

Maklumat dalam penerbitan ini adalah mengikut negeri, daerah pentadbiran dan mukim. Jadual 1 memaparkan data penduduk dan demografi kawasan Daerah Pentadbiran di peringkat negeri berdasarkan Banci Penduduk dan Perumahan (Malaysia) 1980, 1991, 2000, 2010 dan 2020.

PUNCA DATA

Data penduduk, isi rumah dan tempat kediaman merupakan penemuan utama yang berasaskan kepada data awalan yang dibuat selepas kerja luar dan sebelum prosesan data berkomputer.

PENDEKATAN BANCI

Pada Banci Malaysia 2020, pelbagai kaedah pengumpulan data telah digunakan:

1. **e-Census**

Pengisian soal selidik secara atas talian oleh responden melalui pautan Portal Banci (<https://ecensus.mycensus.gov.my>).

2. **Computer Assisted Telephone Interview (CATI)**

Pembanci akan membuat temu ramah melalui telefon dan semua maklumat responden akan dimasukkan dalam sistem CATI.

3. **Computer Assisted Personal Interview (CAPI)**

Pembanci akan melawat TK dan melakukan proses temu ramah bersama responden dengan merekodkan maklumat responden secara online dan offline menggunakan tablet atau telefon pintar.

4. **Paper and Pen Interview (PAPI)**

Pembanci akan melawat TK untuk melakukan proses temu ramah secara bersemuka kepada responden dan mencatatkan maklumat yang diperoleh di dalam borang soal selidik.

5. **Drop-off & Pick-up (DOPU)**

Pembanci meninggalkan borang soal selidik (drop-off) di TK responden dan mengambil semula borang soal selidik (pick-up) yang telah diisi dengan lengkap oleh responden.

De Jure

Banci Malaysia 2020 menggunakan pendekatan 'de jure' bermaksud di mana semua orang dihitung pada Hari Banci (7 Julai 2020) mengikut tempat tinggal biasa mereka.

Soal selidik (Dokumen 2) telah digunakan untuk mengisi maklumat bagi orang yang berada di tempat tinggal persendirian manakala soal selidik (Dokumen 3a dan 3b) telah digunakan untuk tempat kediaman beramai-ramai seperti asrama kolej/ universiti, asrama perubatan, rumah kebajikan/ institusi sosial, berek polis/ tentera, penjara dan orang yang tiada tempat tinggal.

Pendekatan **de jure** telah diguna pakai untuk Banci Malaysia 2020. Pembancian dijalankan ke atas semua orang di tempat tinggal biasa mereka pada 7 Julai 2020 iaitu merujuk kepada mereka yang telah atau akan tinggal sebagai ahli biasa isi rumah ini bagi tempoh enam bulan atau lebih dalam tahun 2020 yang meliputi:

- a. Bayi yang lahir pada atau sebelum Hari Banci dan masih hidup pada Hari Banci (7Julai 2020);
- b. Orang yang meninggal dunia pada atau selepas Hari Banci (7 Julai 2020);
- c. Penyewa, penumpang, pelawat, pembantu rumah, orang tua dan saudara mara yang biasa tinggal bersama IR ini;
- d. Pelajar (sekolah rendah dan menengah) yang tinggal di asrama (di Malaysia) dalam tahun 2020;
- e. Ahli biasa yang tiada di TK ini **untuk tempoh kurang dari 6 bulan** kerana bekerja, berkursus, bercuti, melancong ke tempat lain (dalam dan luar negara), mengunjungi tempat ibadat dan lain-lain; dan
- f. Sesiapa yang berada/ akan berada di hospital untuk tempoh kurang dari enam bulan dalam tahun 2020.

Berikutan penularan COVID-19 di seluruh negara, operasi banci telah dijadualkan semula sebanyak empat kali dalam tempoh Julai 2020 hingga Oktober 2021 dan ditutup secara rasmi pada 31 Oktober 2021. Pengiraan penduduk diselaraskan semula dengan tempoh rujukan banci.

LIPUTAN BANCI

Kategori berikut **tidak termasuk** dalam kiraan binci memandangkan mereka tinggal di negara ini kurang dari enam bulan dalam tahun 2020:

- a. Bayi yang lahir selepas Hari Banci (7 Julai 2020);
- b. Orang yang meninggal dunia sebelum Hari Banci (7 Julai 2020);
- c. Penuntut Malaysia yang telah berada di luar negara bagi tempoh lebih 6 bulan dalam tahun 2020; dan
- d. Rakyat Malaysia yang bekerja di luar negara bagi tempoh lebih dari enam bulan dalam tahun 2020.

KONSEP DAN DEFINISI

Selain daripada klasifikasi kumpulan etnik ini, etnik terperinci berdasarkan data yang diperoleh akan diterbitkan dari semasa ke semasa. Semua maklumat yang dikutip semasa banci termasuk kumpulan etnik dan kewarganegaraan adalah berdasarkan kepada jawapan responden dan tidak merujuk kepada sebarang dokumen rasmi.

Maklumat kewarganegaraan harus digunakan dengan berhati-hati kerana ianya tertakluk kepada ralat kandungan dan liputan terutamanya bagi bukan warganegara seperti banci.

Bagi tujuan penerbitan ini, beberapa istilah telah digunakan dan didefinisikan seperti berikut:

Purata kadar pertumbuhan penduduk tahunan

Purata kadar pertumbuhan penduduk tahunan telah dikira sebagai:

$$r = \left(\frac{1}{n} \ln \frac{P_n}{P_0} \right) \times 100$$

Di mana,

r = purata kadar pertumbuhan penduduk tahunan

n = bilangan tahun yang tepat di antara P_0 dan P_n

P_0 = penduduk pada tahun asal

P_n = penduduk pada tahun kemudiannya

\ln = logaritma asli

Nisbah jantina

Nisbah jantina ialah bilangan lelaki bagi setiap 100 perempuan.

$$\text{Nisbah jantina} = \frac{\text{Bilangan lelaki dalam tahun } t}{\text{Bilangan perempuan dalam tahun } t} \times 100$$

Purata saiz isi rumah

Purata saiz isi rumah ialah bilangan orang bagi setiap isi rumah, dan dikira seperti berikut:

$$\text{Purata saiz isi rumah} = \frac{\text{Bilangan penduduk}}{\text{Bilangan isi rumah}}$$

Kepadatan penduduk

Kepadatan penduduk bagi satu kilometer persegi ialah nisbah penduduk sesebuah kawasan geografi yang tertentu pada keluasan kilometer persegi untuk kawasan yang sama.

PERUBAHAN KAWASAN/ SEMPADAN

Selepas tahun 2010, terdapat beberapa penubuhan kawasan baru atau perubahan sempadan yang telah diwartakan oleh pihak berkuasa berkenaan untuk wilayah persekutuan dan daerah pentadbiran. Senarai lampiran berkaitan penubuhan kawasan baru dan perubahan sempadan adalah seperti berikut:

PETA MALAYSIA

Dalam penerbitan ini turut dimasukkan peta Malaysia (Lampiran 5) yang menunjukkan dua entiti geografi iaitu Semenanjung Malaysia dan Sabah/ Sarawak. Setiap satunya dilukis mengikut skala masing-masing. Walaupun dipisahkan oleh Laut China Selatan sejauh 500 kilometer, peta berkenaan dilukiskan berhampiran untuk mencapai maksud yang lebih jelas. Unit geografi yang ditunjukkan dalam peta meliputi 156 daerah pentadbiran serta tiga wilayah persekutuan iaitu Kuala Lumpur, Labuan dan Putrajaya.

INDIKATOR DEMOGRAFI

Semua indikator demografi di dalam laporan ini dikira menggunakan anggaran penduduk pertengahan tahun. Walaubagaimanapun, indicator di peringkat daerah dikira menggunakan unjuran penduduk. Anggaran penduduk pertengahan tahun adalah berdasarkan data Banci Penduduk dan Perumahan 2010 yang telah disesuaikan untuk kurang penghitungan.

KELUARAN DALAM NEGERI KASAR

Keluaran Dalam Negeri Kasar

Keluaran Dalam Negeri Kasar (KDNK) boleh diukur dengan menggunakan tiga kaedah iaitu, Kaedah Pengeluaran (penjumlahan nilai ditambah), Perbelanjaan (penjumlahan perbelanjaan akhir) dan Pendapatan (penjumlahan pendapatan yang diagihkan oleh unit pengeluar residen). Walau bagaimanapun, penyusunan KDNK Negeri di Malaysia hanya menumpu kepada Kaedah Pengeluaran sahaja.

Pada asasnya KDNK ialah konsep nilai ditambah. Ia adalah jumlah nilai ditambah bagi semua pengeluar residen ditambah dengan cukai dan ditolak subsidi atas produk yang tidak termasuk dalam pengiraan output. KDNK berasaskan pendekatan pengeluaran (output) boleh didefinisikan sebagai jumlah nilai barang dan perkhidmatan yang dikeluarkan di Malaysia setelah ditolak dengan barang dan perkhidmatan yang digunakan dalam proses pengeluaran (penggunaan perantaraan) sebelum ditolak penggunaan modal tetap.

Kaedah ini turut dikenali sebagai kaedah nilai ditambah kerana ia bersamaan dengan penjumlahan nilai ditambah iaitu jumlah perbezaan di antara nilai output kasar unit pengeluaran residen (yang diukur dalam harga pengeluar) dengan nilai penggunaan perantaraan (yang diukur dalam nilai pembeli) dan ditambah dengan duti import. Perbezaan di antara output kasar dengan penggunaan perantaraan adalah nilai ditambah. Kaedah ini akan dapat menunjukkan sumbangan setiap aktiviti ekonomi terhadap keseluruhan KDNK.

Unit pengeluaran dianggap sebagai residen yang mana; individu atau isi rumah yang tinggal atau menetap di sesebuah negeri bagi tempoh tidak kurang dari satu tahun, manakala bagi pertubuhan pula ialah apabila ia mengekalkan pusat kepentingan ekonominya di wilayah ekonomi negeri tersebut sepanjang tempoh rujukan berkenaan. Wilayah ekonomi adalah terdiri daripada mana-mana kawasan geografi yang ditadbir oleh kerajaan negeri, di mana orang, barang, perkhidmatan, dan modal adalah bergerak secara bebas. KDNK pada harga pasaran/ pembeli mewakili keputusan akhir daripada aktiviti pengeluaran oleh unit pengeluar residen.

Pusat Kepentingan Ekonomi Utama

Sesuatu unit institusi dianggap residen bagi sesebuah wilayah ekonomi apabila wujudnya perkaitan yang kuat antara unit institusi tersebut di wilayah ekonomi tertentu, dengan kata lain, Pusat Kepentingan Ekonomi Utama (*System of National Accounts, SNA 2008*).

Pusat Kepentingan Ekonomi Utama merangkumi kawalan efektif sesebuah kerajaan negeri terhadap aktiviti ekonomi yang dilakukan khususnya ke atas hak pemilikan. Wilayah ekonomi adalah termasuk tanah, ruang udara, pengairan, hak ke atas perikanan, minyak atau mineral. Biasanya, kawalan efektif kerajaan negeri boleh dilihat melalui pemberian lesen, kawalan operasi dan sebagainya.

Sesuatu unit institusi mempunyai pusat kepentingan ekonomi yang dominan dalam sesebuah wilayah ekonomi apabila wujudnya lokasi, tempat kediaman, tempat pengeluaran atau lain-lain premis. Setiap unit tersebut terlibat dalam aktiviti ekonomi dan transaksi berskala besar bagi satu tempoh masa yang panjang.

KDNK Mengikut Negeri

KDNK mengikut Negeri adalah penyusunan KDNK yang merangkumi 13 buah negeri, W.P. Kuala Lumpur (termasuk W.P. Putrajaya) dan W.P. Labuan. Penyusunan ini hanya dikeluarkan secara tahunan dengan menggunakan kaedah pengeluaran pada harga malar 2010 mengikut kaedah pengeluaran. Konsep dan kaedah yang digariskan adalah berasaskan SNA 2008 yang ditakrifkan oleh Pertubuhan Bangsa-Bangsa Bersatu.

KDNK Pada Harga Malar

KDNK pada harga malar adalah nilai KDNK tanpa kesan harga. KDNK pada harga malar ini penting bagi membolehkan perbandingan sebenar perubahan tingkat pengeluaran/ kuantiti barang dan perkhidmatan yang berlaku dalam aktiviti ekonomi.

Supra State

Berdasarkan System of National Accounts (SNA) 2008, terdapat tiga jenis unit institusi iaitu yang mempunyai pusat kepentingan ekonomi dan kebanyakannya aktiviti adalah di dalam lingkungan satu wilayah; unit pelbagai wilayah dengan pusat kepentingannya di beberapa wilayah tetapi bukan seluruh negara; dan unit yang beroperasi pada peringkat nasional, iaitu pusat kepentingannya tidak boleh dikaitkan dengan kedudukan geografi (*Supra State*). *Supra State* pada peringkat negeri adalah bersamaan dengan organisasi luar wilayah pada peringkat nasional. Di Malaysia, *Supra State* merangkumi aktiviti pengeluaran yang melangkaui pusat kepentingan ekonomi utama bagi mana-mana negeri.

INDEKS HARGA PENGGUNA

Indeks Harga Pengguna (IHP) mengukur perubahan peratus kos pembelian mengikut masa bagi 'bakul' tetap barang dan perkhidmatan yang mewakili corak purata pembelian oleh sekumpulan penduduk pada sesuatu tempoh masa yang ditetapkan. 'Bakul' ini merujuk kepada barang dan perkhidmatan yang mempunyai kualiti dan kuantiti yang seakan-akan sama atau tidak berubah, mengandungi item yang berada lama atau boleh diukur secara berterusan di pasaran berbanding dengan masa. Perubahan harga barang yang berlaku dalam bakul ini adalah disebabkan oleh perubahan harga yang sebenarnya sahaja, iaitu perubahan harga ini tidak berkaitan langsung dengan perubahan pada kuantiti atau kualiti barang dan perkhidmatan tersebut.

Indeks Harga dikira mengikut negeri-negeri di Semenanjung Malaysia, Sabah dan Sarawak. Walau bagaimanapun, indeks bagi negeri Perlis digabungkan dengan Kedah; W.P. Putrajaya dengan Selangor dan W.P. Labuan dengan Sabah memandangkan sumbangan relatif yang kecil bagi negeri-negeri tersebut. Semasa Penyiasatan Perbelanjaan Isi Rumah dijalankan, saiz sampel yang mewakili ketigatiga negeri ini tidak mencukupi bagi pengiraan indeks negeri.

EKSPORT DAN IMPORT

Pintu keluar dan masuk

Pintu keluar dan masuk merujuk kepada laluan untuk keluar atau masuk dari negara ini sama ada melalui laut, udara atau tanah (termasuk saluran paip dan kabel). Nilai eksport atau import mengikut negeri berdasarkan pintu keluar dan masuk tidak menggambarkan eksport atau import oleh negeri berkenaan sebaliknya hanya melalui pintu keluar dan masuk di negeri tersebut sahaja. Sebagai contoh, sesuatu barang mungkin dikeluarkan oleh syarikat di negeri A dan dieksport melalui pintu keluar di negeri B. Berdasarkan pintu keluar dan masuk, nilai eksport tersebut akan dilaporkan oleh negeri B.

Nilai eksport atau import mengikut pintu keluar dan masuk tidak dilaporkan bagi negeri yang mempunyai kurang daripada tiga (3) pintu keluar dan masuk.

INTRODUCTION

The 2020 Population and Housing Census of Malaysia (MyCensus 2020) is the sixth census that was conducted since the formation of Malaysia in 1963. Previous censuses were carried out in 1970, 1980, 1991, 2000 and 2010. The Census 2020 provides information on the characteristics of living quarters, households and population in Malaysia as a benchmark for the demographic and socio-economic characteristics of the population. Census data form the basis for monitoring population and housing trends to national development planning.

The Federal Government is responsible for the undertaking of the census and it is conducted under the provision of the Census Act, 1960 (Revised-1969). The Department of Statistics, Malaysia (DOSM) was entrusted to conduct the MyCensus 2020 with full co-operation and participation of several State Governments and Federal Government Agencies. The purpose of this report is to provide information on living quarters, households and population by state, administrative district, parliament and state legislative assembly in Malaysia.

The data in this publication is the census data of the Census of Malaysia 2020. Data for the years 1970, 1980, 1991, 2000 and 2010 refer to the final figures.

MyCensus 2020 is a complex data collection project. Therefore, the possibility of coverage and content errors is inevitable. In terms of coverage errors, part of living quarters, households or population may be left out, erroneously included or duplicated. Content errors in particular were based on erroneous responses on sex, age, citizenship, marital status, religion and ethnic group. To estimate the two errors, the Census Coverage Evaluation was completed, as recommended by the United Nations in the manual entitled Principles and Recommendations for Population and Housing Censuses Revision 3 (UNSD, 2015). The rate for MyCensus 2020 will only be known after the CCES is completed.

This publication provides population and household data from MyCensus 2020 according to basic demographic characteristics such as sex, age group, ethnic group, religion, marital status and citizenship by state, administrative district and mukim.

GEOGRAPHICAL DIVISIONS

MyCensus 2020 covers all states in Malaysia. Each state is divided into its respective administrative district (AD). For the purpose of census operations, a small enumeration unit which is an enumeration block (EB) has been created and contained an average of 80 to 120 living quarters with an estimated population of 500 to 600 persons. Approximately 80 to 120 EBs form a census district (CD).

Malaysia consists of thirteen states and three federal territories. Each state is divided into several AD. In Kelantan, the AD is known as 'Jajahan'. Each AD is also stratified into mukim. This type of administrative structure is applicable to all states except Kelantan, Sabah, Sarawak, W.P. Labuan dan W.P. Putrajaya. In this matter, the state of Kelantan has three levels of administration that is 'jajahan, daerah and mukim'. For the state of Sabah, the mukim level does not exist whereas for Sarawak some AD are further sub-divided into sub-districts. W.P. Labuan and W.P. Putrajaya do not have mukims or other subdivisions as a unit of administration. List of Mukims for each state based on the list provided by the Department of Survey and Mapping Malaysia (JUPEM).

During the MyCensus 2020, an enumerator is entrusted with one EB. A supervisor will monitor the enumerators for the three census circles (CC), each consists approximately seven EBs. A District Superintendent will be responsible for a census district comprising approximately 15 CCs. All District Superintendents in every AD are under the responsibility of the Assistant Commissioner of Census. All Assistant Commissioners of each state are under the control of the Deputy Commissioner of Census for that state. The Deputy Commissioner of Census of each state is responsible directly to the Commissioner of Census.

To launch the census operation, each district also has officers appointed as MyAD and MyCD officers who are responsible for technical aspects and help monitor the progress of operations in the field. Meanwhile, from the aspect of training each enumerator and supervisor is given adequate training either through training workshops or online, namely the Malaysia Statistics Ubiquitous Learning (MySUL) training program.

The census organization at the state and geographical divisions is as follows :

Position	Area of Responsibility
Assistant Commissioner	Headquarters and State
Assistant Commissioner (Technical)	State
District Superintendent	Census District
Supervisor	Census Circle
Enumerator	Enumerator Block

Information in this publication refers to urban and rural areas by state and administrative districts. Table 1 shows data and administrative district by state based on the Population and Housing Censuses Malaysia of 1980, 1991, 2000, 2010 and 2020.

DATA SOURCE

The data on population, households and living quarters are preliminary figures based on summary counts made after the field operations prior to computer processing.

CENSUS APPROACH

In MyCensus 2020, a multi-modal data collection method was used:

1. e-Census

The completion of online census form by respondents through the Census Portal (<https://ecensus.mycensus.gov.my>).

2. Computer Assisted Telephone Interview (CATI)

Data collection through telephone and all respondent's information recorded into the CATI system.

3. Computer Assisted Personal Interview (CAPI)

A face to face interview or data collection using smart device either online or offline.

4. Paper and Pen Interview (PAPI)

A face to face interview or data collection using questionnaire.

5. Drop-off & pick-up (DOPU)

Census enumerator drop off a set of questionnaire at respondent's living quarter and pick up the questionnaire that has been filled by the respondent.

De Jure

MyCensus 2020 uses a 'de jure' approach meaning that everyone is counted on Census Day (7th July 2020) according to their usual place of residence.

The questionnaire (Document 2) was used to fill in the information of persons found at private living quarters whilst the Documents 3a and 3b were used for the collective living quarters such as colleges/ universities, medical hostels, charitable/ social welfare institutions, military/ police barracks, prisons as well as homeless persons.

The **de jure** approach was adopted for MyCensus 2020. All persons were according to their usual place of residence on Census Day on 7th July 2020. A usual member is one who had stayed or intended to stay as usual member of the household for six months or more in the year 2020:

- a. Babies born on or before Census Day and still living on Census Day (7th July 2020);
- b. Those who passed away before Census Day (7th July 2020);
- c. Lodgers, boarders, visitors, housemaid, elderly persons and relatives who usually live together with this household;
- d. Students (primary and secondary schools) who stays in hostels (in Malaysia) in the year 2020;
- e. Usual members who are away from living quarters for less than six months because of work, attending course, on leave, on vacation (in and outside Malaysia), visiting place of worship and etc; and
- f. Any person staying/ will be staying in hospital for less than six months in the year 2020.

Following the outbreak COVID-19 nationwide, the census operation was rescheduled four times in the period of July 2020 to October 2021 and officially closed on 31 October 2021. In terms of population count, it is realigned to the reference period.

CENSUS COVERAGE

The following categories were **excluded** from the census count on the basis that they were staying in the country for less than six months in the year 2020:

- a) Babies born after Census Day (7th July 2020);
- b) Those who passed away before Census Day (7th July 2020);
- c) Malaysian students who have been living overseas for more than six months in the year 2020; and
- d) Malaysians who work overseas for more than six months in the year 2020.

CONCEPTS AND DEFINITION

For the purpose of this census, several concepts were used such as:

Living Quarters (LQ)

Living quarters is a place which is structurally separated and independent and is meant for living. The terms 'separate' and 'independent', mean the following:

a. Separate

A structure is considered separate if it is surrounded by walls, fence, etc. and is covered by a roof.

b. Independent

A structure is said to be independent if it has a direct access via a public staircase, communal passageway or landing (that is, occupants can come in or go out of their living quarters without passing through someone else's premises).

Household

A household consists of related and/ or unrelated persons who usually live together and make common provisions for food and other essentials of living. The household may contain one or several members.

Head of Household

Head of household refer to regular household members who live in the residence and is considered as the head by other members of household.

Member of Household

Member of household refers to members who have or will stay with other household members for a period of six months or more in the census year, although none during the census is held.

For the purpose of tabulation and analysis, the classification on ethnic group is based on the classification that have been endorsed by Inter Agency Technical Committee (IATC). The classification is as follows:

Peninsular Malaysia	Sabah & W.P. Labuan	Sarawak
Malaysian Citizens	Malaysian Citizens	Malaysian Citizens
Bumiputera	Bumiputera	Bumiputera
Malay	Malay	Malay
Other Bumiputera	Kadazan / Dusun Bajau Murut Other Bumiputera	Iban Bidayuh Melanau Other Bumiputera
Chinese	Chinese	Chinese
Indians	Indians	Indians
Others	Others	Others
Non-Malaysian Citizens	Non-Malaysian Citizens	Non-Malaysian Citizens

Apart from the classification of these ethnic groups, detailed ethnicities based on the data obtained will be published from time to time. All information collected during the census including ethnic group and nationality is based on respondents' answers and does not refer to any official documents.

Information on citizenship should be used with caution as it is subject to content and coverage errors especially for non-citizens as in censuses in most countries.

For the purpose of this publication, several terms are used and have been defined as follows:

Average annual population growth rate

The average annual population growth rate has been calculated as:

$$r = \left(\frac{1}{n} \ln \frac{P_n}{P_0} \right) \times 100$$

Where;

- r** = the average annual population growth rate;
- n** = the exact number of years between **P₀** and **P_n**
- P₀** = the population at the initial year
- P_n** = the population at the latter year
- ln** = the natural logarithm.

Sex ratio

The sex ratio is the number of males per 100 females.

$$\text{Sex ratio} = \frac{\text{Number of males in year } t}{\text{Number of females in year } t} \times 100$$

Average household size

The average household size is the number of persons per household, and is calculated as:

$$\text{Average household size} = \frac{\text{Number of persons}}{\text{Number of households}}$$

Population Density

The density of persons per square kilometre is the ratio of the population of a given geographic area to the number of square kilometres in the same area.

Area/ Boundary Changes

After the year 2010, there were several new areas created or boundary changes that were gazetted by the relevant authorities. List of appendices related to the establishment of new areas and boundary changes are as follows:

- Appendix 1: Establishment of New Administrative Districts in the 2020 Census
- Appendix 2: List of Mukims/ Towns/ Towns Included in Other Mukims/ Towns/ other Towns
- Appendix 3: List of Local Authority Areas Involved in the Establishment or Change of Boundaries and Names, Malaysia, 2020
- Appendix 4: Number of Local Authority Areas by State, Malaysia, 2020
- Appendix 5: Map showing the boundaries of the State and Administrative District, Malaysia 2020

DP data released in this report for 1991, 2000 and 2010 were adjusted taking into account the newly created administrative districts and the boundary changes.

Map of Malaysia

Included in this publication is a map of Malaysia (Appendix 5) showing two geographic entities, namely Peninsular Malaysia and Sabah/ Sarawak, each drawn with its own scale, although separated by over 500 kilometres of the South China Sea. They are plotted in closer proximity to achieve maximum clarity. The geographic units shown in this map consist of 144 administrative districts as well as the three federal territories of Kuala Lumpur, Labuan and Putrajaya.

Demographic Indicator

All demographic indicators in this publication are calculated based on the mid-year population estimates. Mid-year population estimates are based on the 2010 Population and Housing Census which had been adjusted for under-enumeration.

The records on live births, stillbirths and deaths received from the National Registration Department (NRD) cover the whole Malaysia. The number of perinatal deaths covers stillbirths and infant deaths aged less than one week. The number of maternal deaths includes deaths caused by mental disorders. The number of deaths in Sabah has been adjusted due to under reporting of death registration obtained from the Study of Under Reporting of Death Registration in Sabah¹ which was conducted by the Department of Statistics, Malaysia.

Unemployment Rate

Unemployment rate is the proportion of unemployed population to the total population in labour force. This rate measures the percentage of unemployed population in labour force.

GROSS DOMESTIC PRODUCT

Gross Domestic Product (GDP)

GDP can be measured by using three approaches namely Production Approach (the sum of value added), Expenditure Approach (the sum of final expenditure) and Income Approach (the sum of incomes distributed by resident producer unit). However, the compilation of GDP by State in Malaysia focuses on using the Production Approach only.

Basically GDP is the concept of value added. It is the total value added for all resident producers plus tax and minus subsidies on products which not included in the valuation of output.

GDP based on the production approach (output) can be defined as the total value of goods and services produced in Malaysia after deducting the goods and services used in the production process (intermediate use) before deducting the use of fixed capital.

This method is also known as value added approach because it is the summation of value added, that is total differences between gross output value of resident producing unit (measured at producer price) and value of intermediate consumption (measured at purchaser's price) plus import duties. The difference between gross output and intermediate consumption is value added. This approach shows the contribution of individual economic activities on overall GDP.

A producing unit is considered as resident which; individuals or households living or residing in a state for a period of not less than one year, while for an organization it is when it maintains the centre of economic interest in the economic territory of that state during the reference period. The economic territory of a country consists of the geographic territory administered by a government within which persons, goods and capital circulate freely. GDP at market price/ buyer represents the final result of production activity by the resident producer unit.

Centre for Key Economic Interest

An institutional unit is considered a resident of an economic territory when there is a strong relationship between the institutional unit in a particular economic territory of a country, in other words, the centre for key economic interests (System of National Accounts, SNA 2008).

The Centre for Key Economic Interest includes the effective control of a state government over economic activities carried out, especially on ownership rights. Economic territory includes land, airspace, irrigation, rights to fisheries, oil or mineral. Usually, effective control of the state government can be seen through licensing, operational control and so on.

An institutional unit has a dominant centre of economic interest in an economic territory when there is a location, place of residence, place of production or other premises. Each of these units is involved in large-scale economic activities and transactions for a long period of time.

GDP by State

GDP by State is a compilation of GDP which covers 13 states, W.P. Kuala Lumpur (include W.P. Putrajaya) and W.P. Labuan. The compilation is only produced at annual

basis by using the production approach at constant price 2010 according to the production approach. The concepts and approach's outlined are based on the 2008 SNA defined by the United Nations.

GDP at Constant Prices

GDP at constant price is GDP value without price effect. GDP at this constant price is important to enable a true comparison of changes in the level of production/ quantity of goods and services that occur in economic activity.

Supra State

Based on the System of National Accounts (SNA) 2008, there are three types of institutional units that have a centre of economic interest and most activities are within one region; multi-provincial units with centres of interest in some provinces but not nationwide; and units operating at the national level, i.e. its centre of interest cannot be associated with geographical position (Supra State). Supra State at the state level is equivalent to an overseas organization at the national level. In Malaysia, Supra State covers production activities that beyond the centre for key economic interest of any state.

CONSUMER PRICE INDEX

Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant 'basket' of goods and services representing the average pattern of purchases made by a particular population group in a specified time period. The 'basket' is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of items in the basket are therefore due only to 'pure' price movements, i.e. price movements that are not associated with changes in the quality and/ or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index is calculated according to states in Peninsular Malaysia, Sabah and Sarawak. However, the index for state of Perlis is combined with Kedah, W.P. Putrajaya with Selangor and W.P. Labuan with Sabah considering the relative contribution for these states are very small. During the Household, Income and Expenditure Survey, the sample size for these states are not representative enough to calculate the state index.

EXPORT AND IMPORT

Exit and entry points

Exits and entrances refer to routes to and from the country either by sea, air or land (including pipelines and cables). The value of exports or imports by state based on exit and entry does not reflect exports or imports by the state but only through exits and entrances in that state only. For example, an item may be produced by a company in state A and exported through an exit in state B. Based on the exit and entry, the value of the export will be reported by state B.

The value of exports or imports by exit and entry is not reported for states with less than three (3) exits and entrances.

An establishment is defined as 'an economic unit engaged in one activity, under a single legal entity and operating in a single physical location'. Each establishment was assigned an industry classification based on its principal activity. In the case of a multi-activity entity, units engaged in separate activities in the same location constituted distinct establishments. Thus, each branch of a multi-branch organization at a different location was conceptually treated as a different establishment.

Value Added

Value added is the increment to the value of commodities and services contributed by the establishment and derived as the difference between the value of gross output and intermediate input.

Number of Persons Engaged

The number of persons engaged in an establishment is defined as the total number of persons engaged in December or the last pay period of the reference year. The number of persons engaged including all working proprietors and active business partners, unpaid family workers and paid employees. Included in this group are part-time workers who are in the payroll and persons on strike, picket and short-term leave (sick, vocational or emergency leave). Not included are workers on indefinite leave.

Value of Fixed Assets

Assets cover all goods, new or used, tangible or intangible, which have a normal economics life span of more than one year (e.g. land, building, machinery and equipment, including transport equipment). The value reported is as at the end of the reference year and is according to the books of accounts of the reporting unit. It includes additions during the year and excludes assets disposed off during the year. It is net of depreciation.
