Core Inflation

Core inflation also rose 3.6 percent in February 2016 compared to the same period of the previous year (Table 3). Core inflation differs from overall CPI (headline CPI) in that it is calculated by excluding prices for goods and services that are subject to fluctuations which considered transitory in nature and do not have a lasting impact on the underlying trend in inflation. These include nine of the CPI's most volatile items of fresh food, as well as administered prices of goods and services. Core inflation measures are used as

operational guides for monetary policy in assessing the direction of inflation.
